Agenda

Topic	Time
01 Hot Issues	40 mins
- Screenings Update Inform: Share updates on projects to improve reliability, adjudication efficiency and BGC communication	20 mins
- Update on Safety Programs that Address Platform Incident Reduction Inform: Review controls live and coming soon to address incident rates in the US6C	20 mins
02 KPI and Deactivation Review	[Time Permitting]
- On Trip Safety	
- Access Safety	
- Safety Related Deactivations	
Appendix:	
- Updated Org Chart	
- Als from Last Meeting and Status	

01 | Hot Issues

40 mins

Screenings Update

20min

BGC Workstreams

Reliability

Address product reliability issues by implementing short term fixes and fixing root cause issues

Projects

- Redesign key feature
- Automate manual sweeps
- Additional issues flagged by City Ops

Adjudication

Improve adjudication operation to build more sustainable and efficient processes

Projects

- Accenture Adjudication Operations Improvement project
- Assess implementation

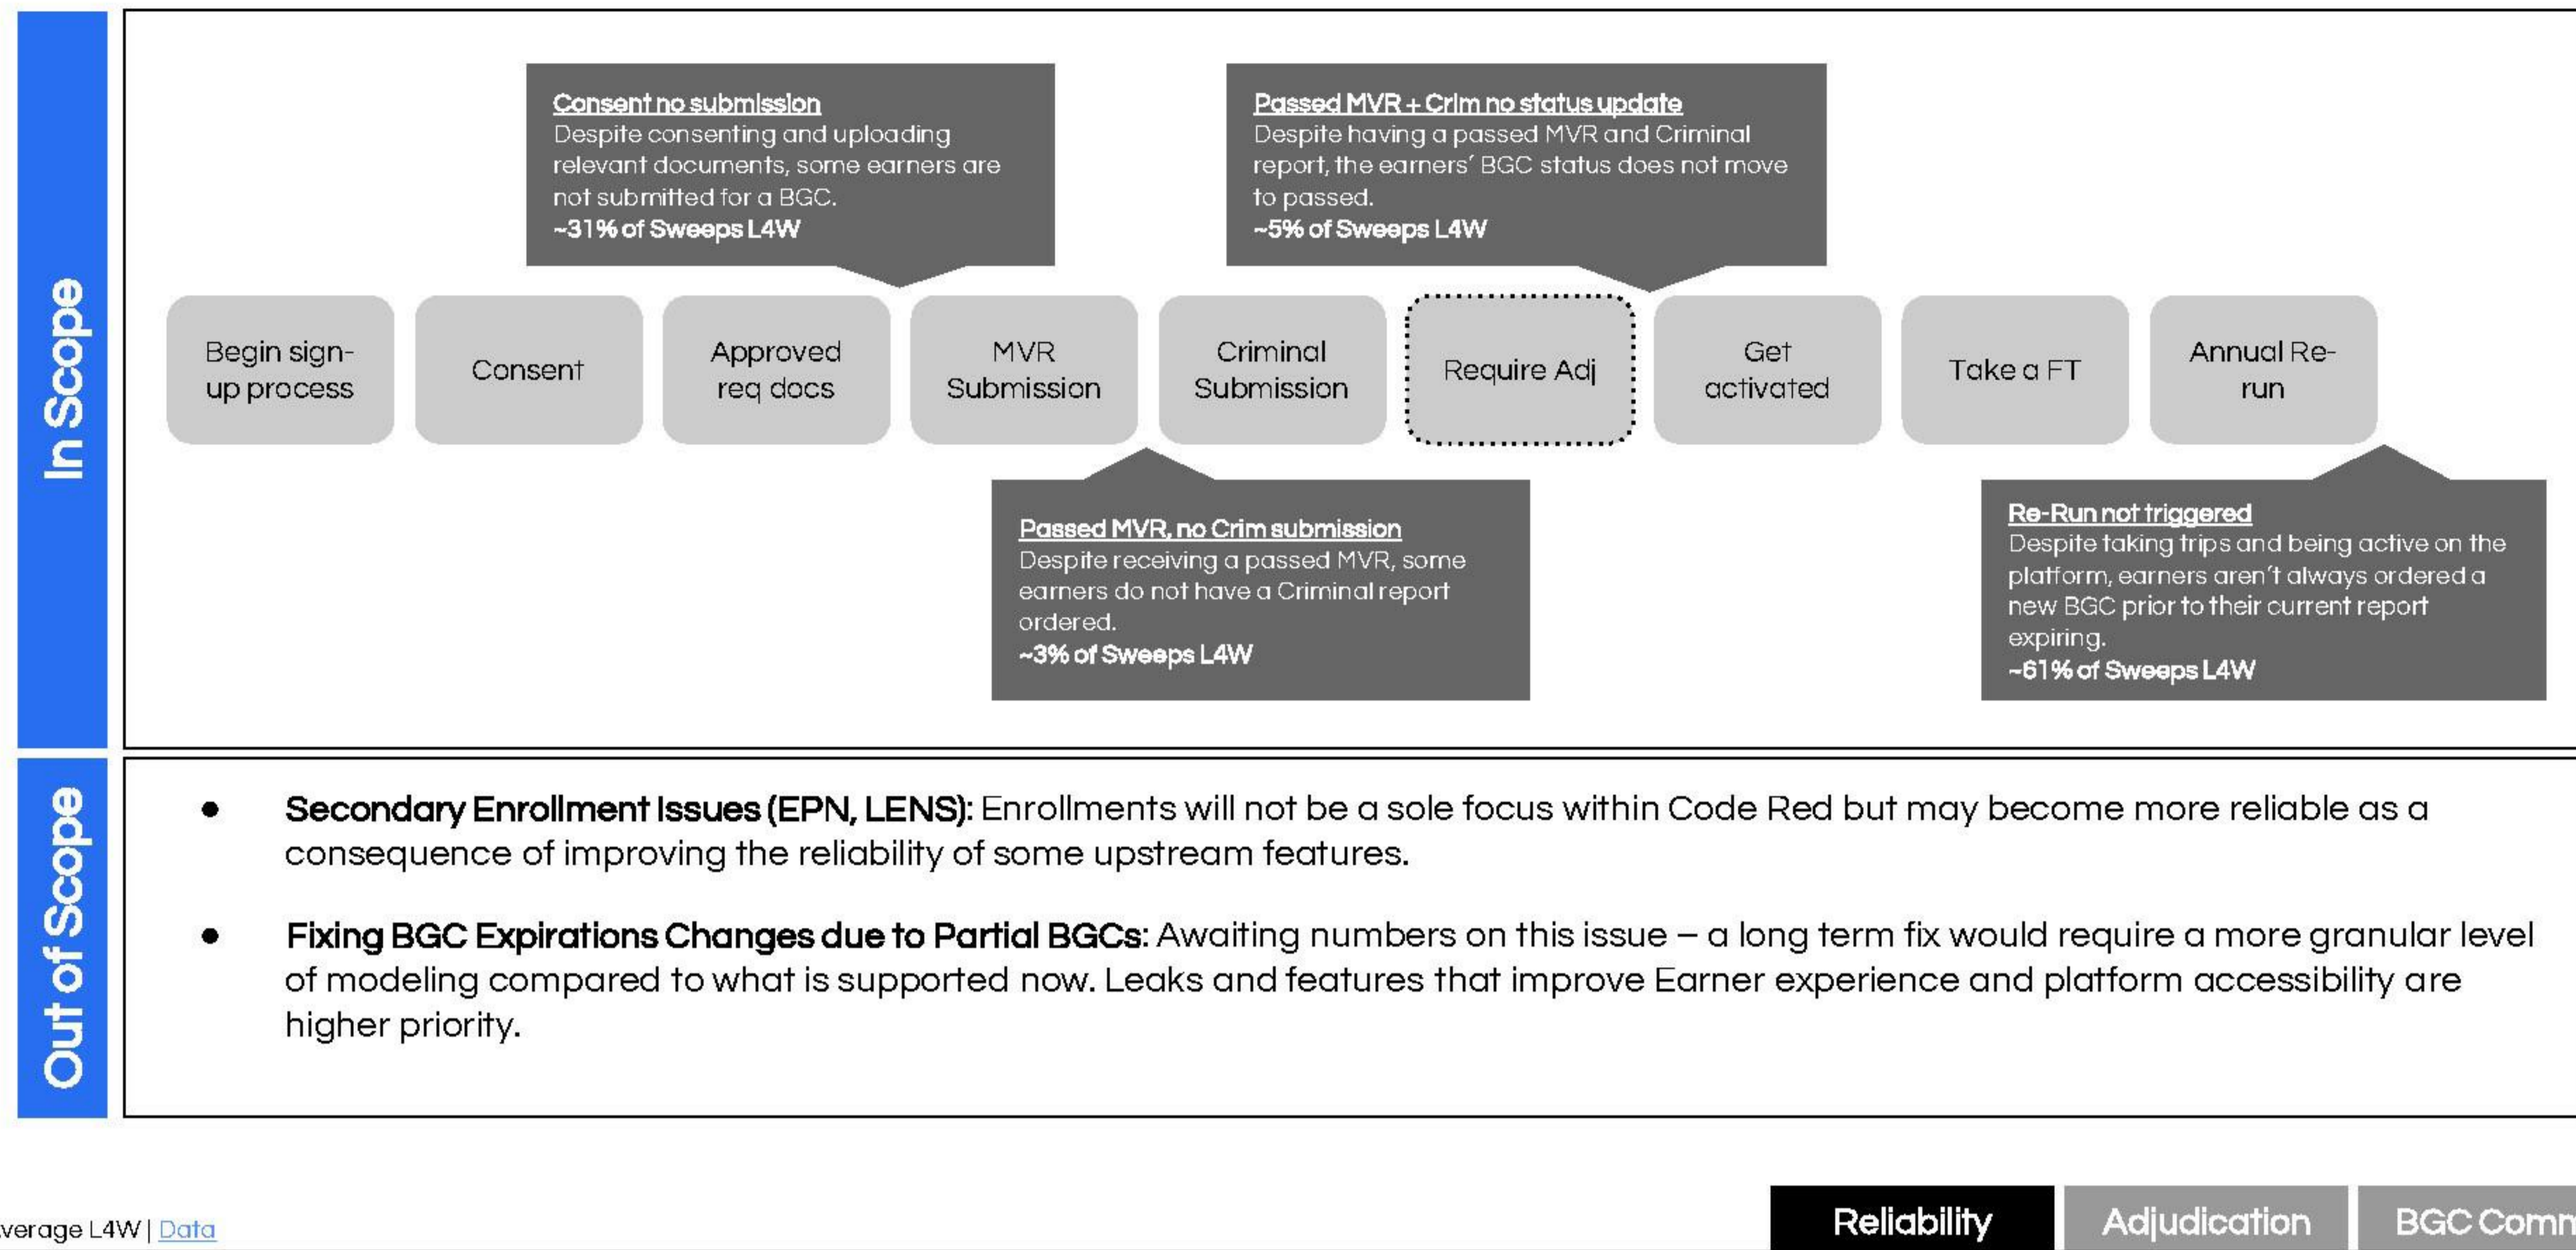

BGC Comms

Review and improve existing background check related comms to improve earner experience

Projects

- Revamp BGC Comms

Code Red will tackle root cause of the main reliability issues

Issues stem from prolonged migration timelines (old Tech), foundational and modeling decisions that don't support the current scale of the business and key concepts that are part of Screenings lifecycle (rerun / expiration).

Note: not all problems are listed here, only those that are swept for on a weekly basis between Tech and Ops.

10/01		 Started Complete At Risk Not Started Paused Code Red Priority						
Big Rock x Theme	Jul	Aug	Sep	Oct	Nov	Dec	H1	
Reliability x Foundations	Modular Onboarding x One Earner Deliverables							
		Go Monorepo Migration		Portability + UP				
		Morpheus Deprecation		Consent Migration	Portability Migration	ELM Migration		
		Vault -> Tokenizer Migration			Rerun Migration	Checkr CM Migration		
		Decouple Consent		CORI Consent x Migration		BGC -> CPP Migration		
		Disable Prog NYS	Automated Sweeps	Trigger Migration		Remaining Asgard Migration		
Coverage [Integrations x Features]		ISB Integration - Canada Earners			uSights + Public API	Sterling - UKI Couriers		
		LENS w/SambaSafety - NYS Drivers			Samba ILH - US			
		Authbridge Webhooks - India Earners						
		Blacktrust Integration - MX Earners						
Transparency x Processing [Support, Adjudication, Tooling]		Bliss Widget - Global Support	Comms Audit + Revamp			AMS: Adjudication Portal MVP		
		BGC Tools UI Updates						
Cut Items x Rationale	Rerun + Expiration Expansion: Hard cut resulting from headcount allocation and current timelines							
	NCC Australia: Hard cut resulting from headcount allocation and current timelines							
	Recoverable Submissions: Sherlock actioning queue being stood up by Ops to address current gap, primary leakages will be addressed via feature migration and rewrites.							
	Auto Report-Adjudication for US Rerun and Re-onboarding: New ask, awaiting data from DS on opportunity sizing							
Multi-Vendor Concurrence + Redundancy: Traffic splitting isn't supportable re: HireRight adjudication experience and current cost compared to Checkr.								

Disabling Progressive Checks, Automated Sweeps are new asks.

Use requirements sheet from Ops to place owners / actioning etc. :

<https://docs.google.com/spreadsheets/d/1NelIpaNmAVDPOAxQ9V0Apbe8WLdIMqkoBPsG7rKHvY/edit#gid=0>

Use table for leakages to explain where items are being addressed:

<https://docs.google.com/document/d/1WzuEFyaEgpyzKgmcIWCGLSUkERKj9i3WasMwVAdGe9Y/edit#>

Addressing Additional Issues Flagged by City Ops

Issue	Description	Next Steps to Address Root Cause of Issues	
Product Reliability Issues - NYC BGC Rerun - BGC Halting after Consent or MVR	Leakages due to product reliability issues caused BGCs resulting in negative earner experience.	In Progress	<ul style="list-style-type: none"> Redesign of key BGC features expect by end of November at the earliest (code red).
Compliance Risks from Partial BGCs	Partial BGCs were launched in the US to address closed courts due to Covid-19. County searches in places with closed courts are skipped and, when reopened, a follow-up report is ordered. However, the follow-up report is unintentionally extending BGC expirations and impacting the rerun cadence in high risk geos.	In Progress	<ul style="list-style-type: none"> Collaborate with City Ops by mid Oct to identify resources to help: <ol style="list-style-type: none"> Define the right cadence and ownership of manual process to mitigate risks for the short term. Evaluate the risk and value of having partial BGCs and provide recommendations for the long term (ie: does it make sense to disable partial checks in high risk markets?).
Communication Challenges - Reporting Changes - New Package - BGC Status Changes	City Ops was not informed about decoupling of MVR and Criminal reports which impacted reporting processes.	Ongoing	<ul style="list-style-type: none"> Improve communication between Safety and City Ops via email updated and Biweekly Compliance Ops Leads
Recoverable Fails	There is a lack of support logic / internal policy for earners that request a BGC rerun after they have failed an initial report even if the changes have now prescribed. Currently, we are addressing each case individually.	Not Started	<ul style="list-style-type: none"> Continue to address individual escalations identified by Teamsters Collaborate with Driver Ops, Central Safety Ops, Legal, and CommOps to create internal policy and support logic for recoverable fails [2022]

Reliability | Adjudication | BGC Comms

Improving the Adjudication Process

We are partnering with Accenture on a 7-week project (~Oct 11 - Nov 22) to identify potential opportunities and solutions to improve the background check adjudication process

Phase	Objective	Deliverables
Discover	Discover existing process to identify pain points that should be addressed	<ul style="list-style-type: none"> Agent Workflow: visual representation of the end-to-end process that agents complete for the background check adjudication process Current State Pain Points: inventory of current pain points based on the agent workflow Tools & Data Landscape: listing of the current data sources tools used to support adjudication process
Envision	Co-create the "North Star" future state vision for adjudication process	<ul style="list-style-type: none"> Future State North Star: future state vision and guiding principles for Uber's background check adjudication process
Formulate	Re-imagine the end-to-end background check adjudication process	<ul style="list-style-type: none"> Future State Process Map: end-to-end future state background check adjudication process Adjudication Portal Business Requirements Document: characteristics that the adjudication portal needs to have from a business objective and end-user perspective Future State Technology Architecture: future technology landscape, tools, and data that are required for the future state process and automation opportunities
Advance	Create roadmap outlining quick wins, mid-term and long-term initiatives	<ul style="list-style-type: none"> Roadmap: recommended and prioritized solutions to and enable new processes, technology, and capabilities.

Update on Safety Programs

20min

In H2 we continue to see an elevated serious auto crash rate and serious physical assault rate

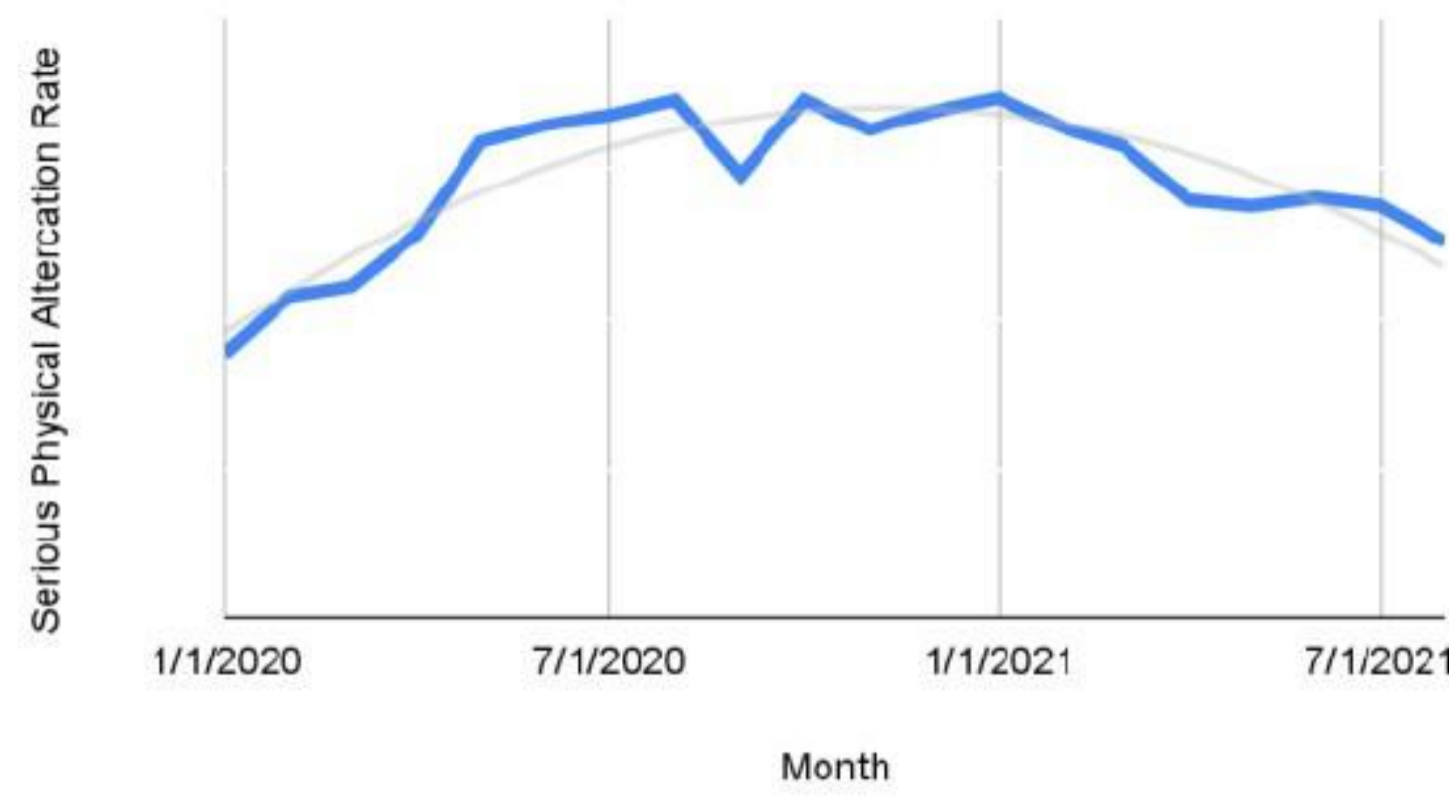

Serious Auto Crashes

While the overall auto crash rate is slightly down year over year (-2%), the **serious auto crash sub-component has been increasing**

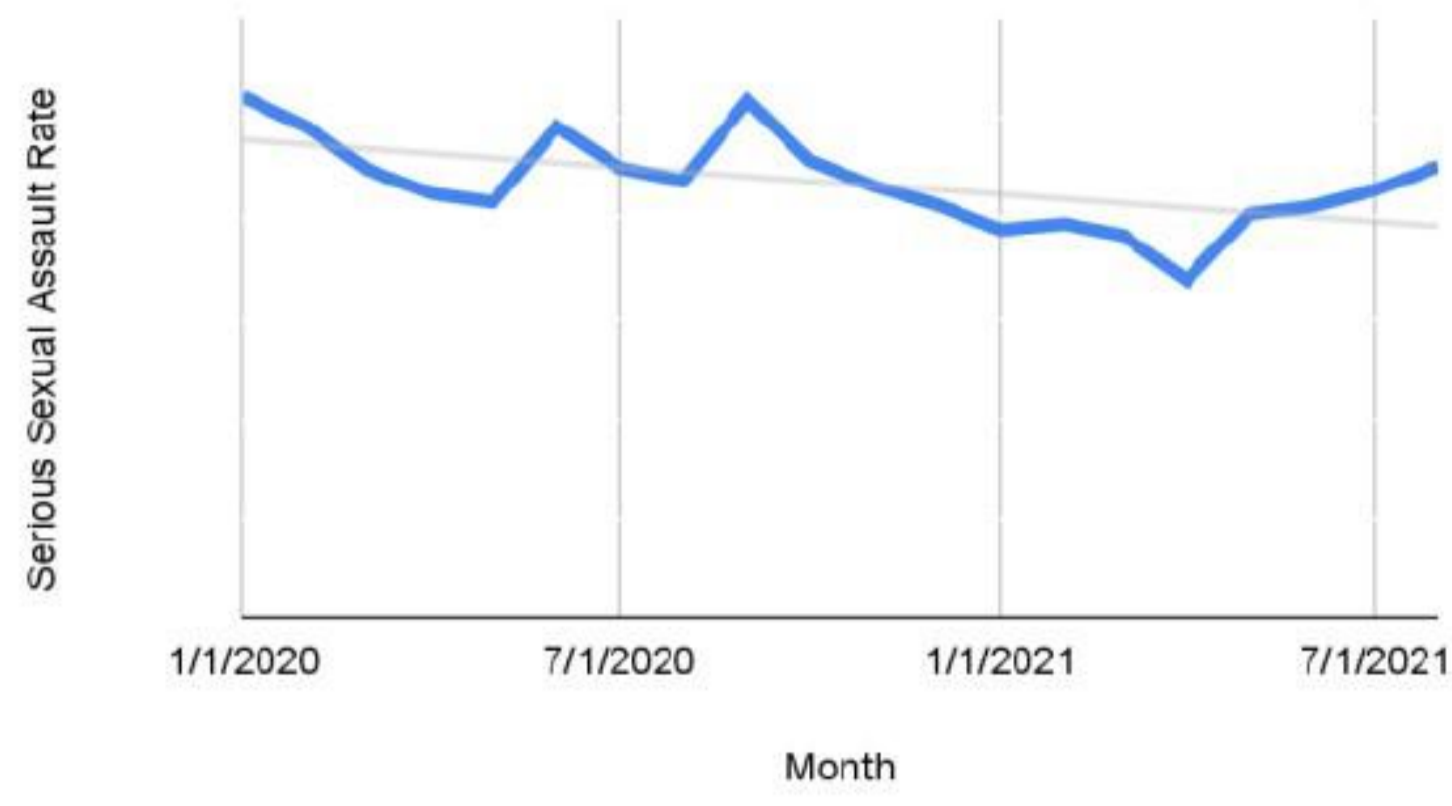

93% of Mobility insurance costs are associated with auto accidents

Serious Physical Assaults

The serious physical assault rate continues to be elevated compared to the prior year - specifically **up 9% year over year** (although recently experienced a downwards trend)

Serious SA/SM

While the serious SA/SM rate is **down 14% year over year** (including the critical SA sub-component) we must continue the positive trend into 2022 given recurring Safety Reports releases in the US

Note: Data are through August 2021. Serious sexual assault rate covers both critical sexual assaults (five most serious subcategories) and non-critical sexual assault and sexual misconduct incidents

Of the 45 tickets reviewed...

Question	Yes	Unknown	No
Did the crash occur at an intersection? *What type of intersection? 6% 3-way, 81% 4-way, 13% Other	36%	22%	42%
Did the crash occur on a highway or freeway?	31%	20%	49%
Was a third party vehicle reported to be speeding prior to the crash?	18%	33%	49%
Did the crash occur at or shortly before the drop-off location?	16%	4%	80%
Did the crash occur while the driver was turning left?	11%	11%	78%
More insights...			

...None of the audits stated that the third party was under the influence of alcohol or drugs. None stated of our driver's partner.

...There were a close amount of audits indicating incidents while turning left/right.
Left 11% Right 9%

Historically we have approached incident reduction through deactivations but the opportunity has been shrinking

As a result, we are approaching incident reductions through **improving user behavior** and **instilling confidence when we have to deactivate**

Improving User Behavior	<ul style="list-style-type: none">• Educational Courses (Road Safety, SA/SM, Anti-Discrimination)• Driving Insights• Dangerous Driving Notifications• Dashcams / In-App Audio
Instilling Confidence in Safety Actioning	<ul style="list-style-type: none">• Community Guidelines Commitment• Pre-Deactivation Notifications• DACT 3.0• Deactivation Appeals

With these objectives we want to inspire trust on the Platform

Safety | Strategic Pillars in H2 2021

Speaker notes

Driver Interventions

-Partnered with US&C Safety Ops, Global Safety Ops, and Policy team to create educational modules that support our telematics product. Previously, drivers received generic messages / linking to Community Guidelines, but not actionable or informative. With the modules (speeding, harsh braking/turn, distracted driving), Uber can be more informative about which specific behaviors drivers have been observed.

-Early lifecycle (post first trip after 10 days): the US&C team ran an experiment to test the efficacy of early lifecycle non-mandatory education. No stat sig impact on dangerous driving reports (only directional) and no stat sig impact to marketplace metrics. In 2022, we will be looking to surface video-based educational modules in early lifecycle. Our hypothesis with DDN is that is with targeted messaging around specific observed behaviors, we can drive more behavior change.

- IPC Pre-DACT notifications: We want to help drivers avoid reaching the deactivation threshold for our safety policies. In order to do this, we're sending a carbon inbox message when a driver has reached 50% of the dangerous driving and IPC policy deactivation thresholds and providing him/her with details on unwanted behavior on the platform and a links for further resources.

- DACT 3.0: We believe we can more accurately predict a driver's safety risk by increasing the number of safety signals we consider. To do this, we've built an ML model that we can onboard to our safety incident policy system, which will lead to a decrease in safety incident rates while deactivating fewer, riskier drivers. The team is currently finalizing our performance results and XP plan to determine if we will roll this out first in the US.

- Appeals: When deactivate drivers, we want to offer more transparency and a remediation channel for certain deactivation types. As a first step, in August we started surfacing additional information to deactivated earners in california, specifically an approved rejection reason and past communication dates (2 most recent). Now we are working towards providing an end-to-end appeals experience that will speed up the appeals process and provide visibility to earners into their appeals application status. We'll be launching this in Jan 2022.

Road Safety, Insurance, Data, and Privacy | H2 2021 US&C Roadmap

	July	August	September	October	November	December
Road Safety			Reduce Compound Turns XP	Feedback on Early Tenured Drivers	DDN - Feedback Tags	Driving Insights
					Rider Audio Seat Belt Reminders	
Insurance						
	Auto Claims Submission XP	Inquiry Response Auto Resolution XP	Crash experience flow w/litigation	Driver Crash Center: Fundamental Infrastructure	Auto Assignment v2	Reverse Flow: Real Time Claim Events
	Farmers Deductible Buy down		Insurance Hub Renewals	Fraud Signals	Guided submission workflow	Unified Insurance Marketplace
	Rider Crash Report XP		Loss Pin Location			
S&I Data						
	Pre-Deactivation Notification IPC	Safety Deactivation Appeals - Surface Deactivation Reason	Self-service questionnaire / Insights generation program	Driver Deactivation Dashboard	DACT Explainability Tooling	
					Roll Out Crash-Only DACT Policy	
Privacy						
				Privacy Center	Self-Service Driver Account Deletion	

Observations

1. In October, getting more rider feedback earlier in a driver's tenure, so we can provide products to help drivers improve.
2. Rider audio seat belt reminder: currently validating our approach via UXR.
3. In November, for dangerous driving notifications (DDN), extension of DDN triggers to rider feedback tags.
4. Insurance - faster claim handling through auto submission

	Delayed

Safe Actors

Rider ID

Mutombo

We also the AS rate trend up in the US by 30% since beginning of yr. The team did a review of 500+ tickets to understand risk factors and working on a number of updates

Plans

Deploy the POAP model to catch bad actors

Iterate on PQM to reduce friction - improve internal quality thresholds

Establish a manual process for reviewing accounts with multiple "tech fails - human pass". Eng solution medium term.

Product changes on the triggering and actioning logic based on the identified risk factors

FAQ

US metrics - 20 -> 27 tickets per million trips (Jan'21) to 27 (Aug'21). Historically driven down from high of 24 (Jan'18) to 17 pre-pandemic (Feb'21)

What were the most common issues? POAP/Photoshop, errors in human review process (MSFT fails the photo, human auditor passes it), and bounce behaviour for bypassing RTID checks.

Rider early lifecycle messaging

Launching: next ~2 weeks

OR

A/C Privileged & Confidential

We build a lot of tools to keep our users safe, and riders tell us they're very valuable in our surveys... but we also know that awareness & usage is low.

In H2 - we're going to make a major push to increase awareness and engagement with our safety features.

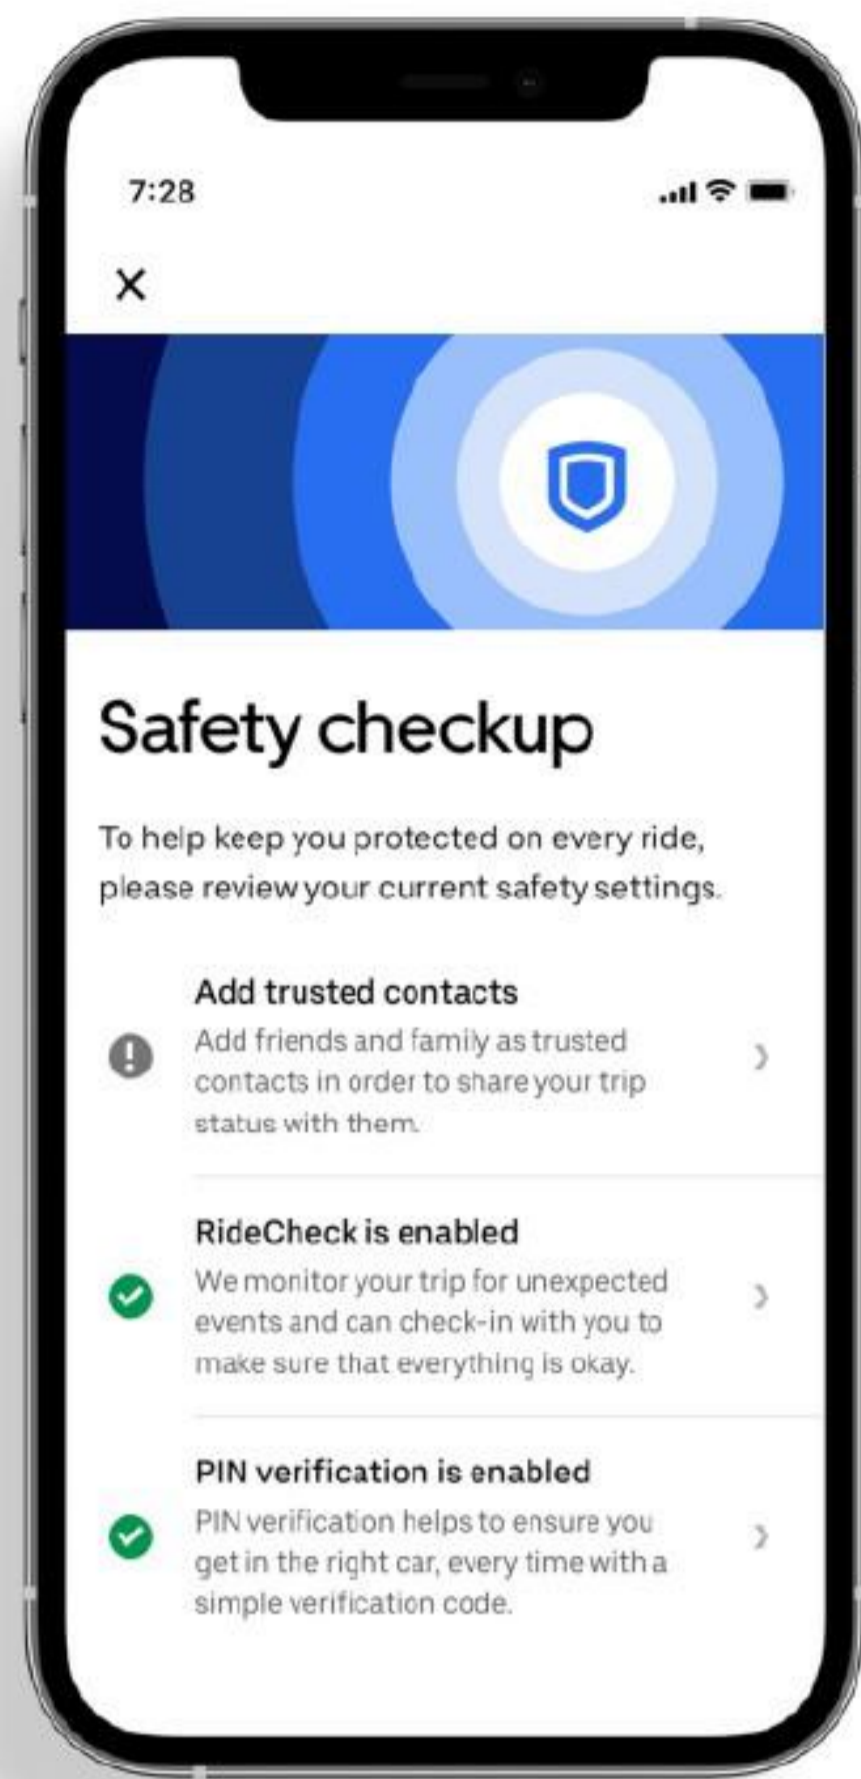

First up is Ring campaign in the rider's early lifecycle.

A sequence of three messages will be presented on a combination of home screens and on-trip screens (depending on trip conversion).

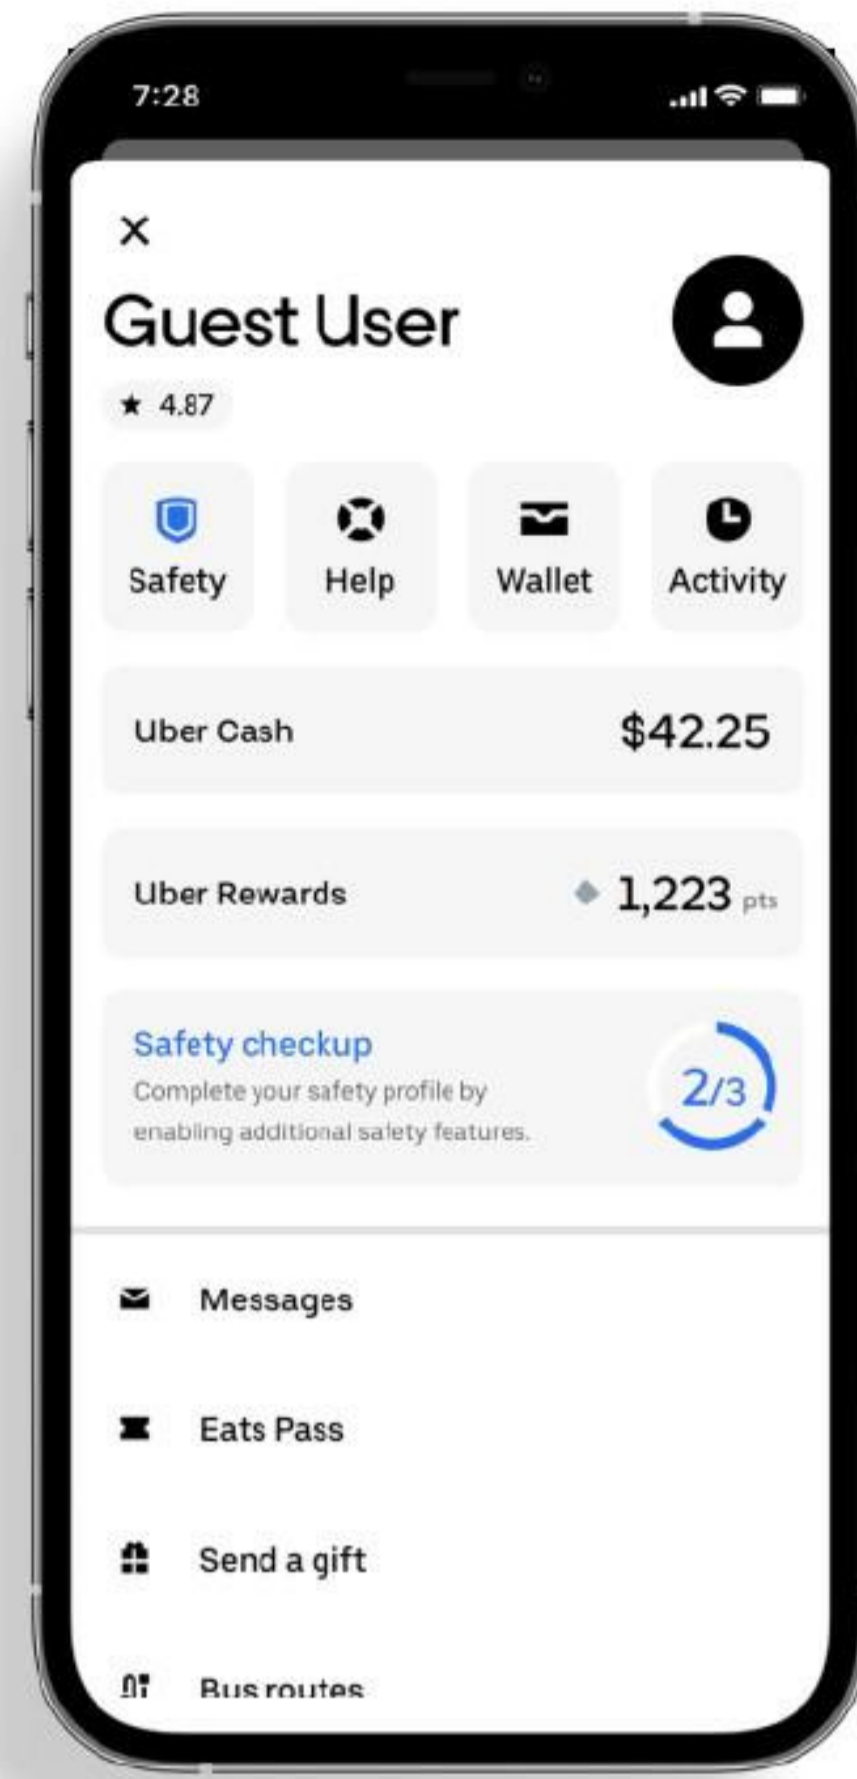

They will link to a microsite with content drawn from our existing marketing materials.

Testing 3 different messaging strategies to compare performance

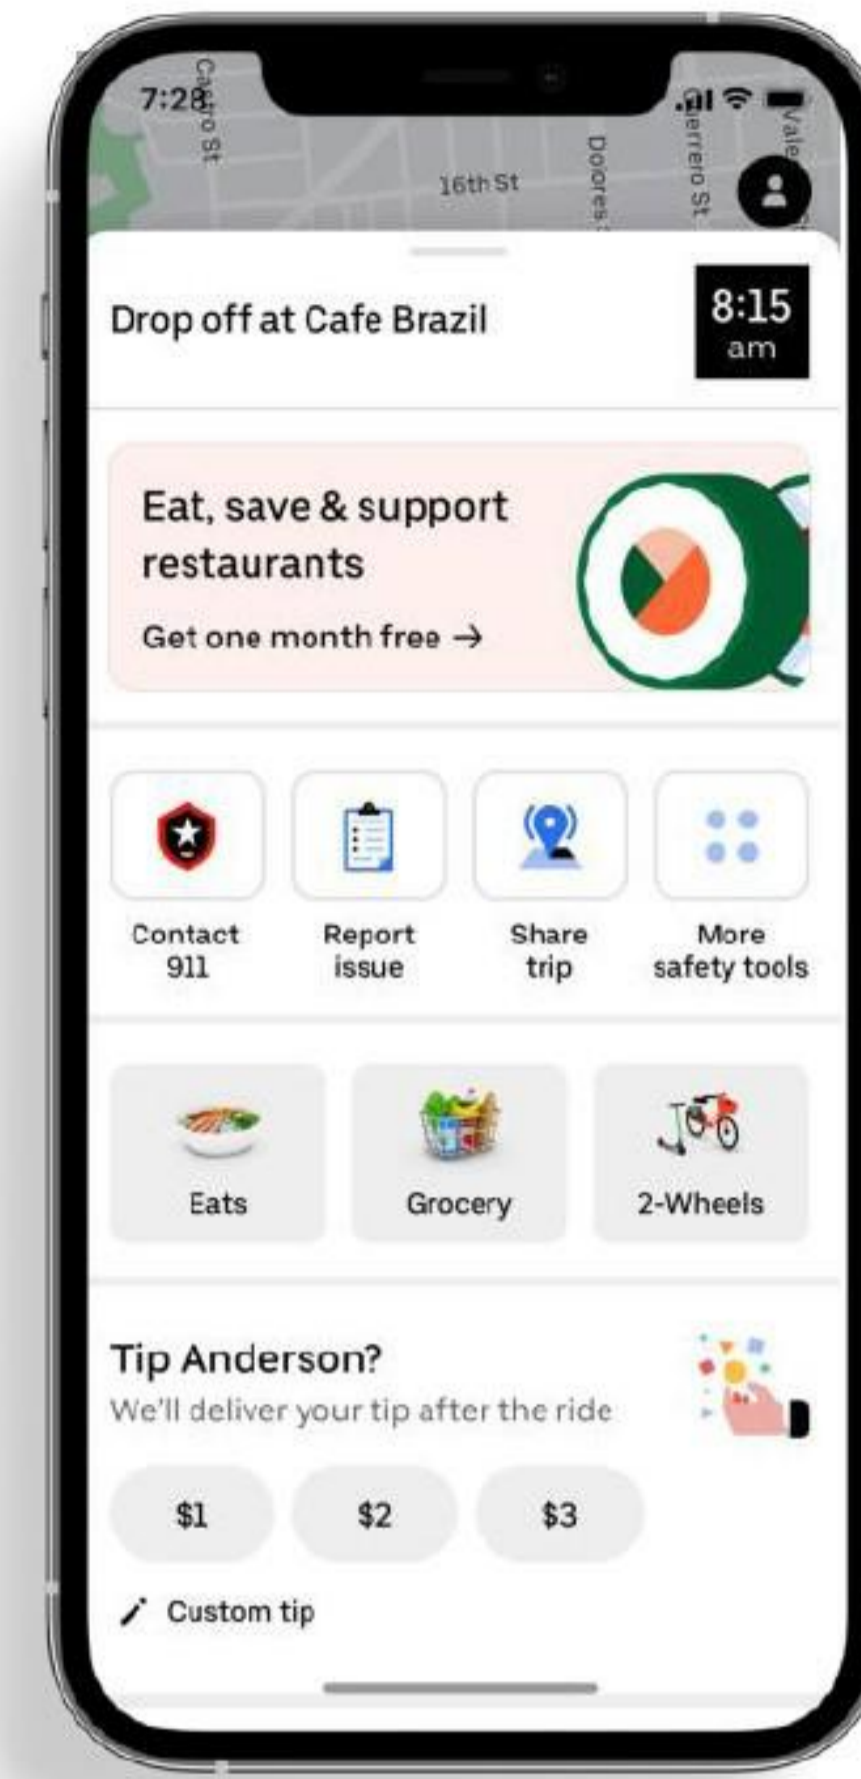

Up next...

Safety Checkup [Oct]
Gamifying the experience of setting up safety tools

Identity Hub Entry [Nov]
Access to our checkup from the new profile home

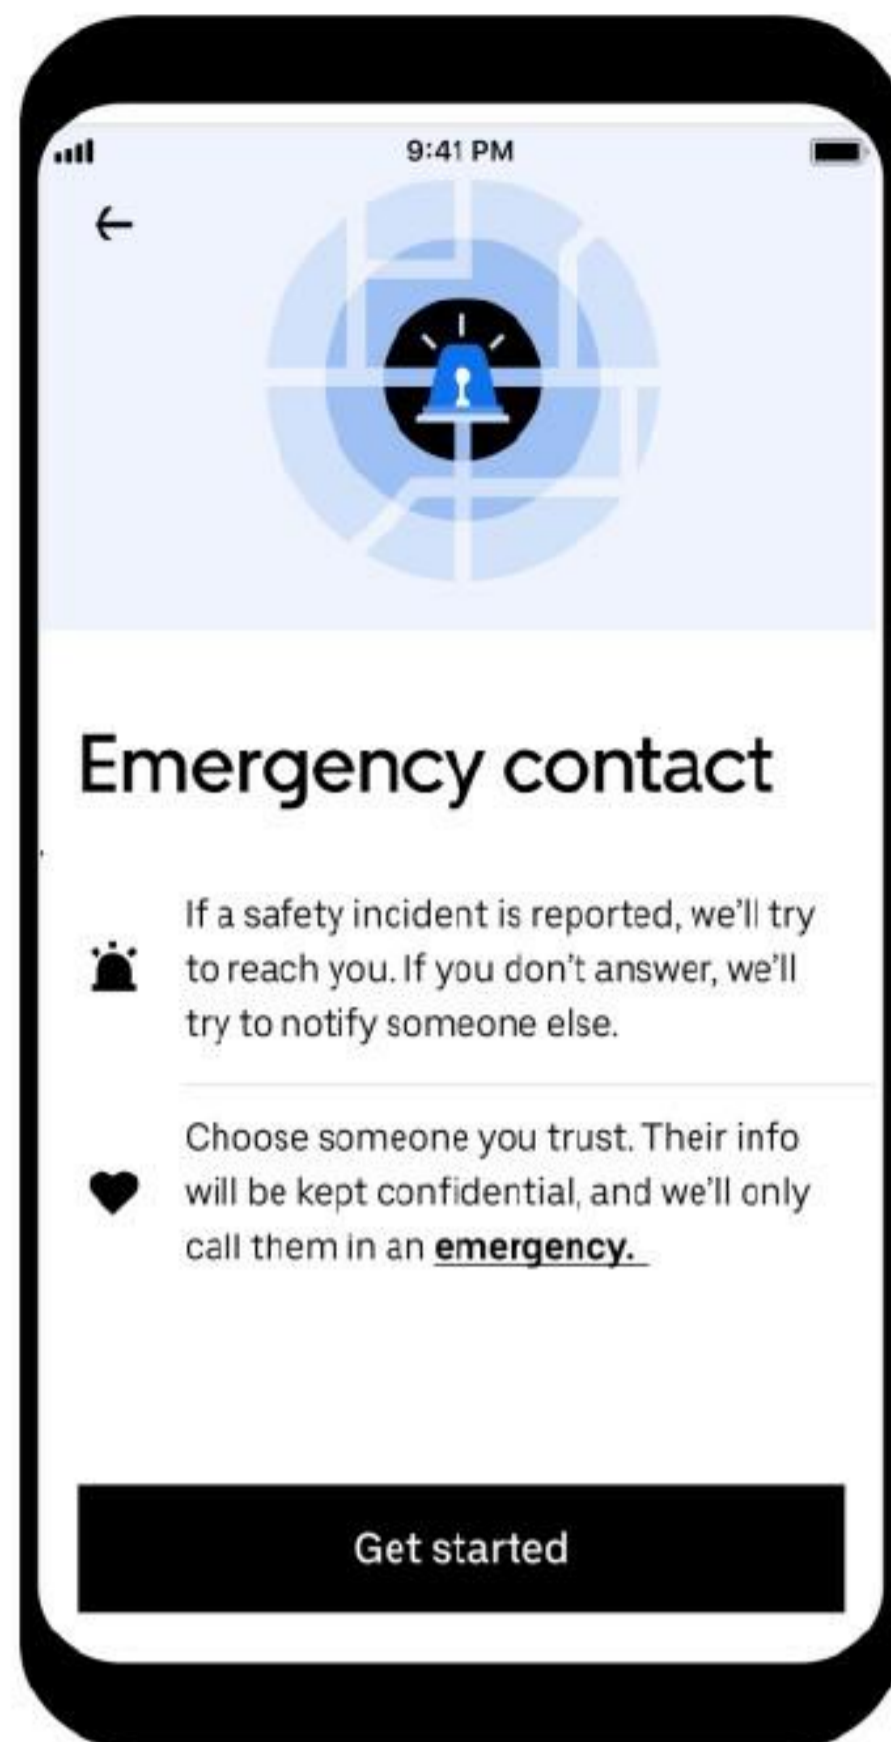

Quick actions [Nov]
Bringing safety tools outside of the Toolkit for awareness and easy access during an incident

A/C Privileged & Confidential

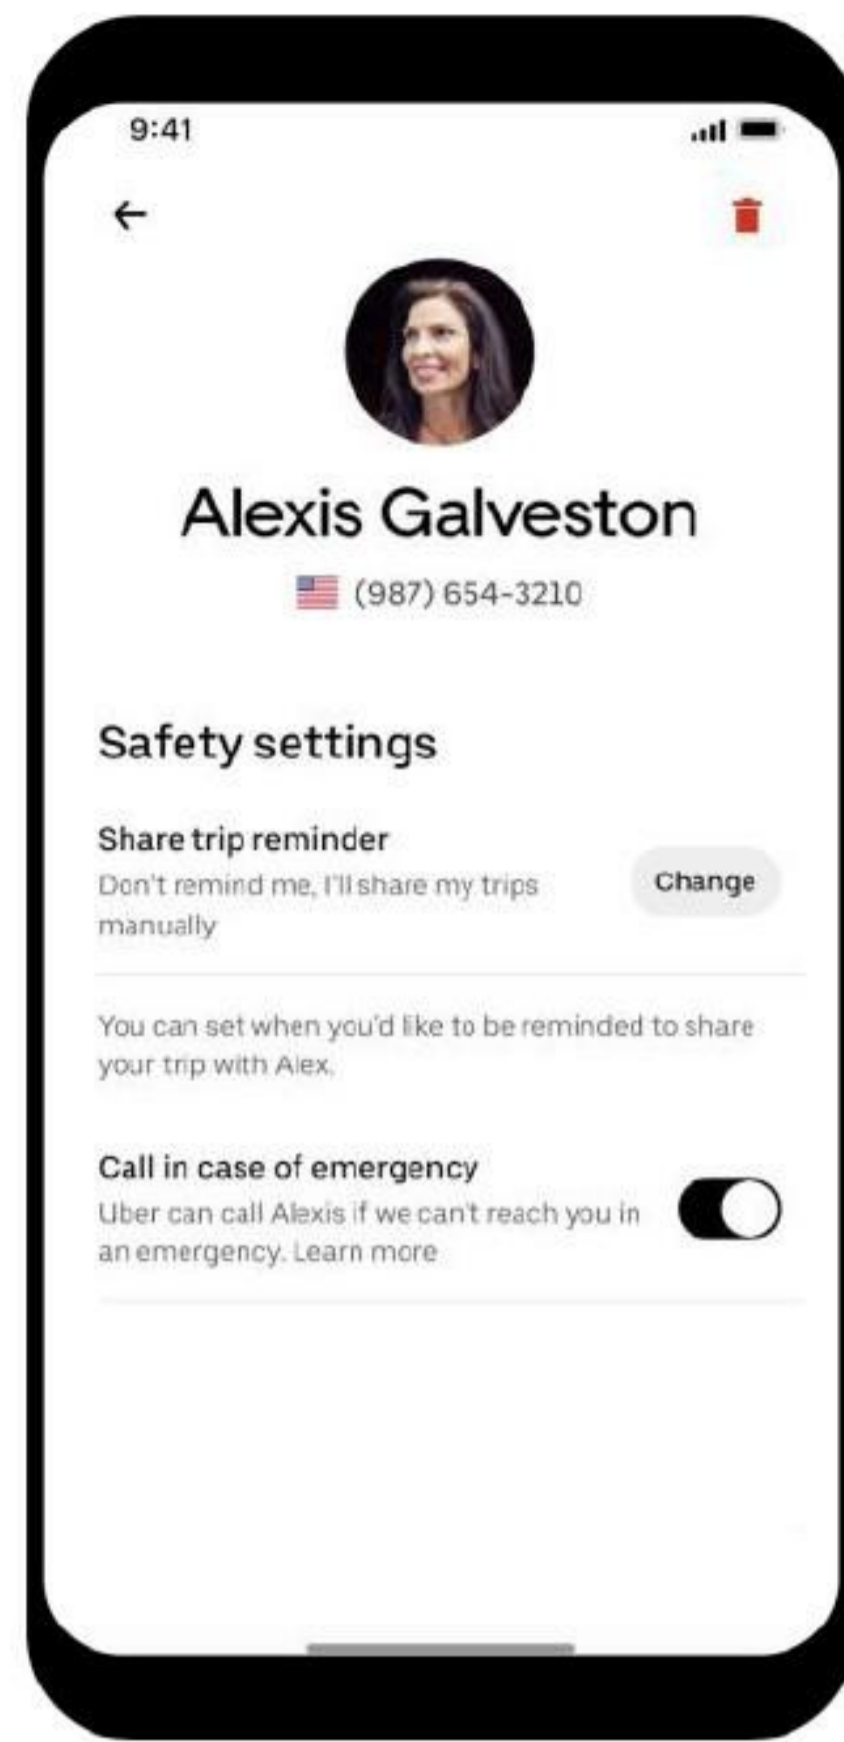

Note: Toolkit redesign- we've seen good feedback from UXR, but resourcing comes next year - then doing all of this for drivers

Prepare for safe trips (Ambient Safety)

Emergency Contacts

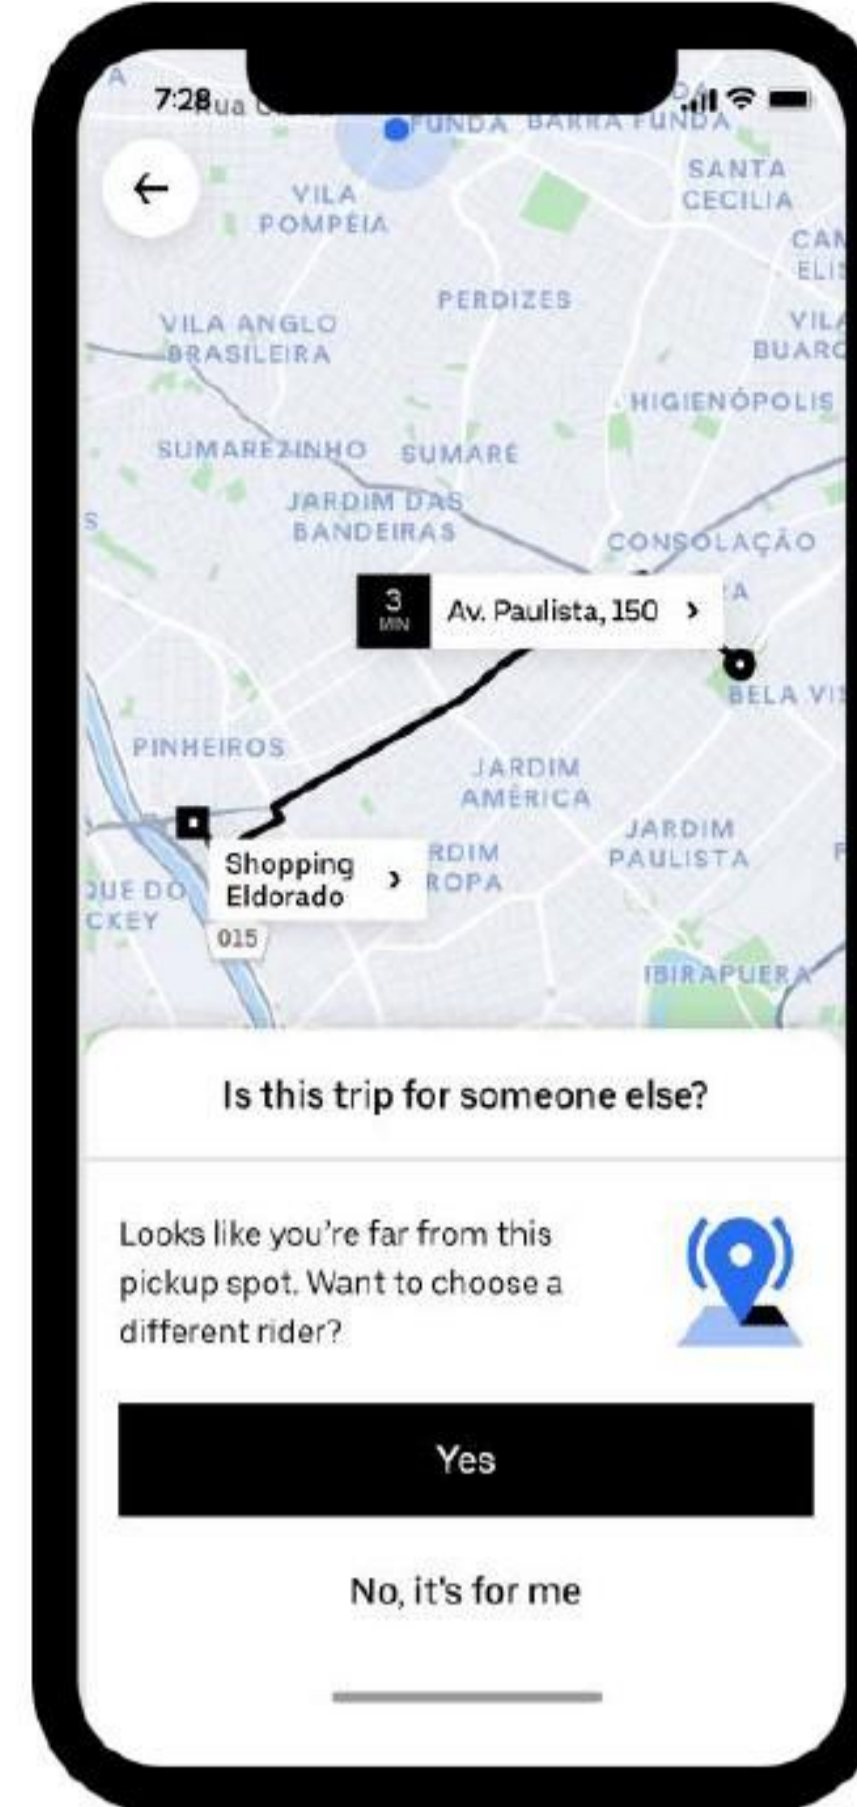

Driver: 21% Rides
WAU that have EC globally

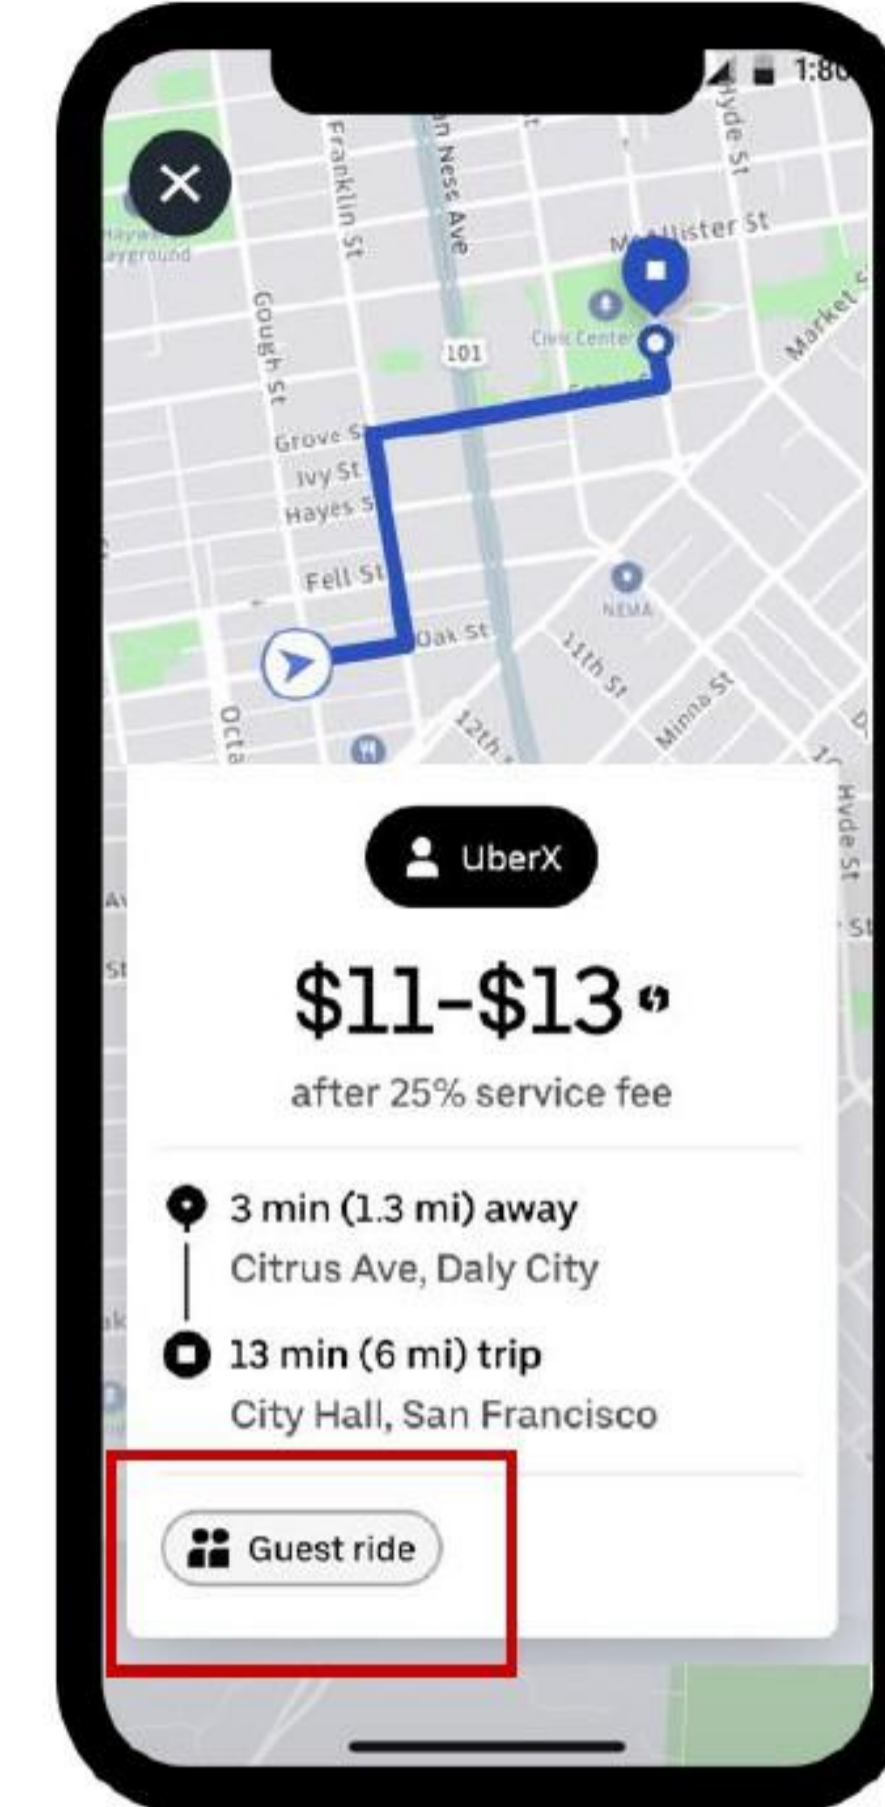

Rider: Launching in Oct

Guest Rides

Pickup prompt: 5x
increase in formal flow

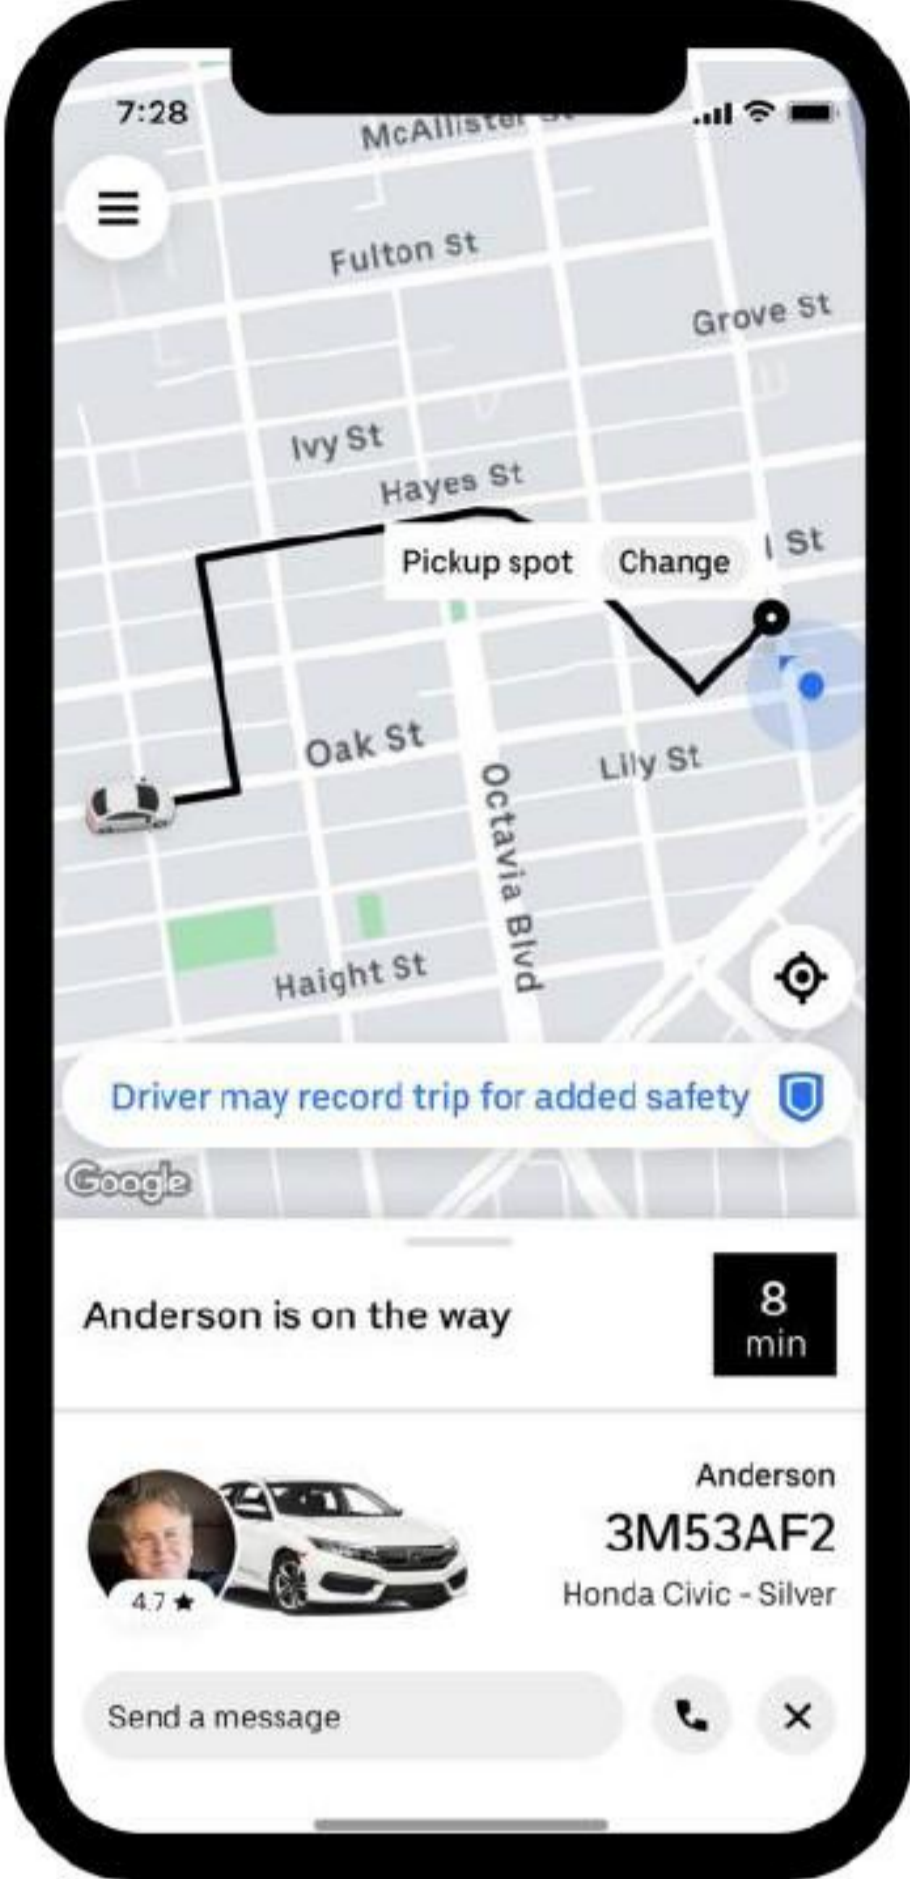

Driver awareness (Oct)

Upcoming: Rider verification, Adoption nudges, etc in Nov

Audio launch markets

Dashcams & Audio recording

Dashcam launches

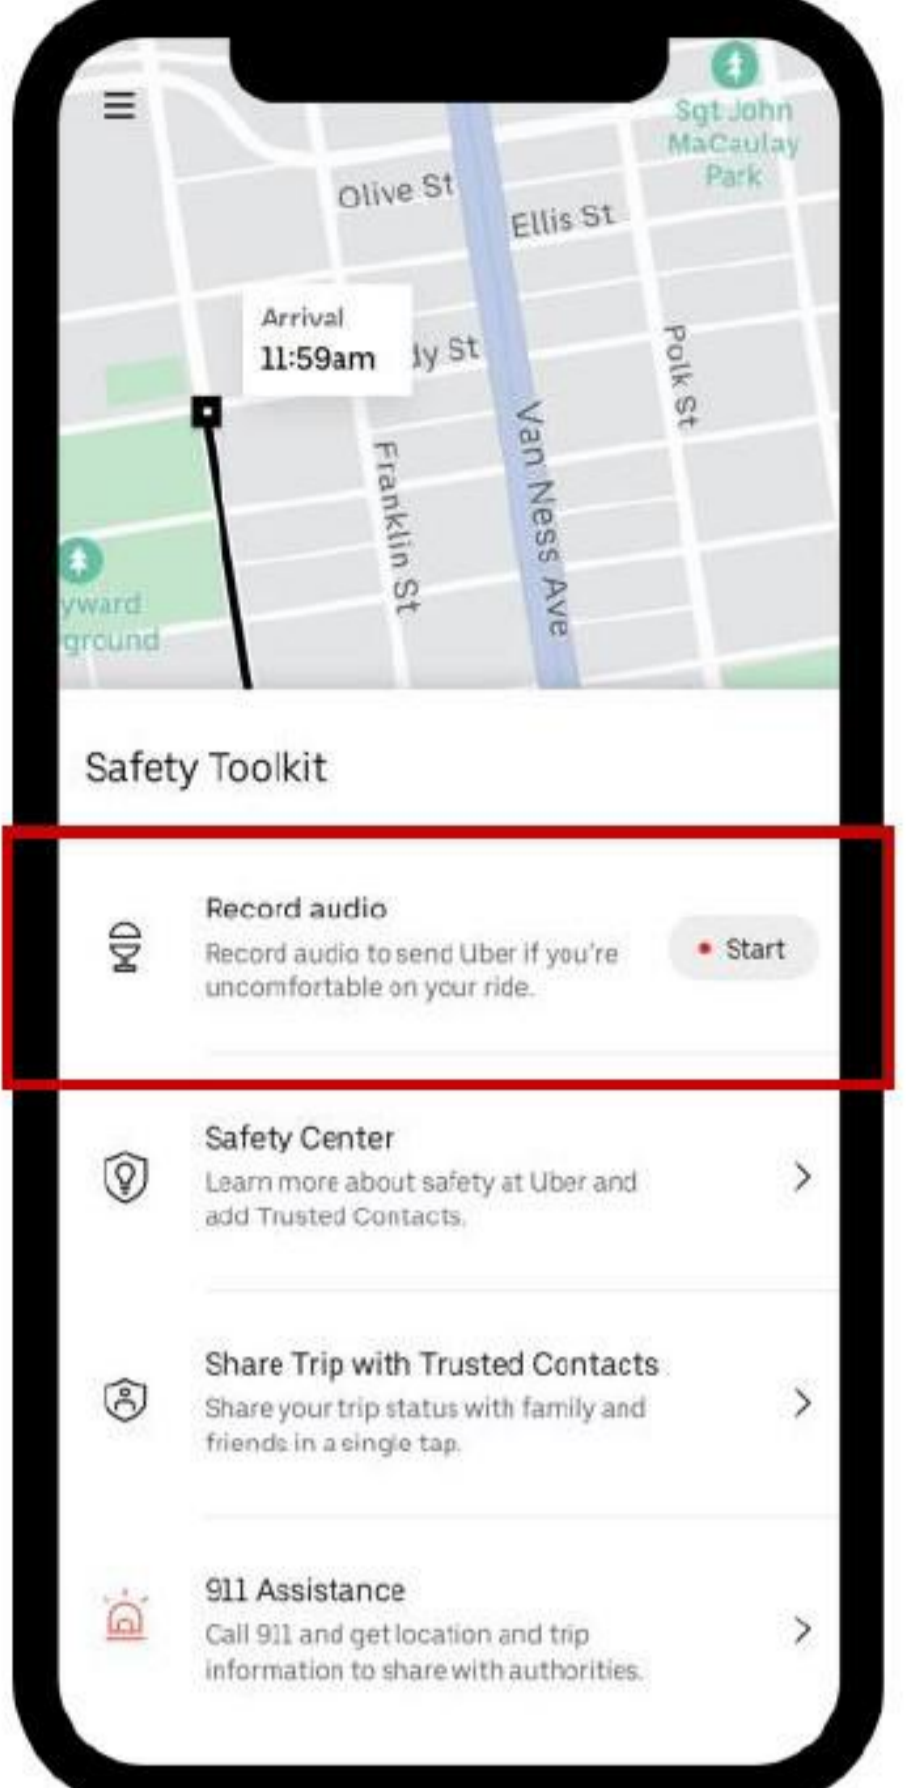

BYOD: 8% drivers registered in US&C (IR analysis in progress)

"Phone as dashcam" Positive results from Latam pilot. Build vs. buy decision in Oct

Vendor integration: Distribute ~12.5k dashcams by Q1'21

Audio

Audio pilot: Launching in Oct

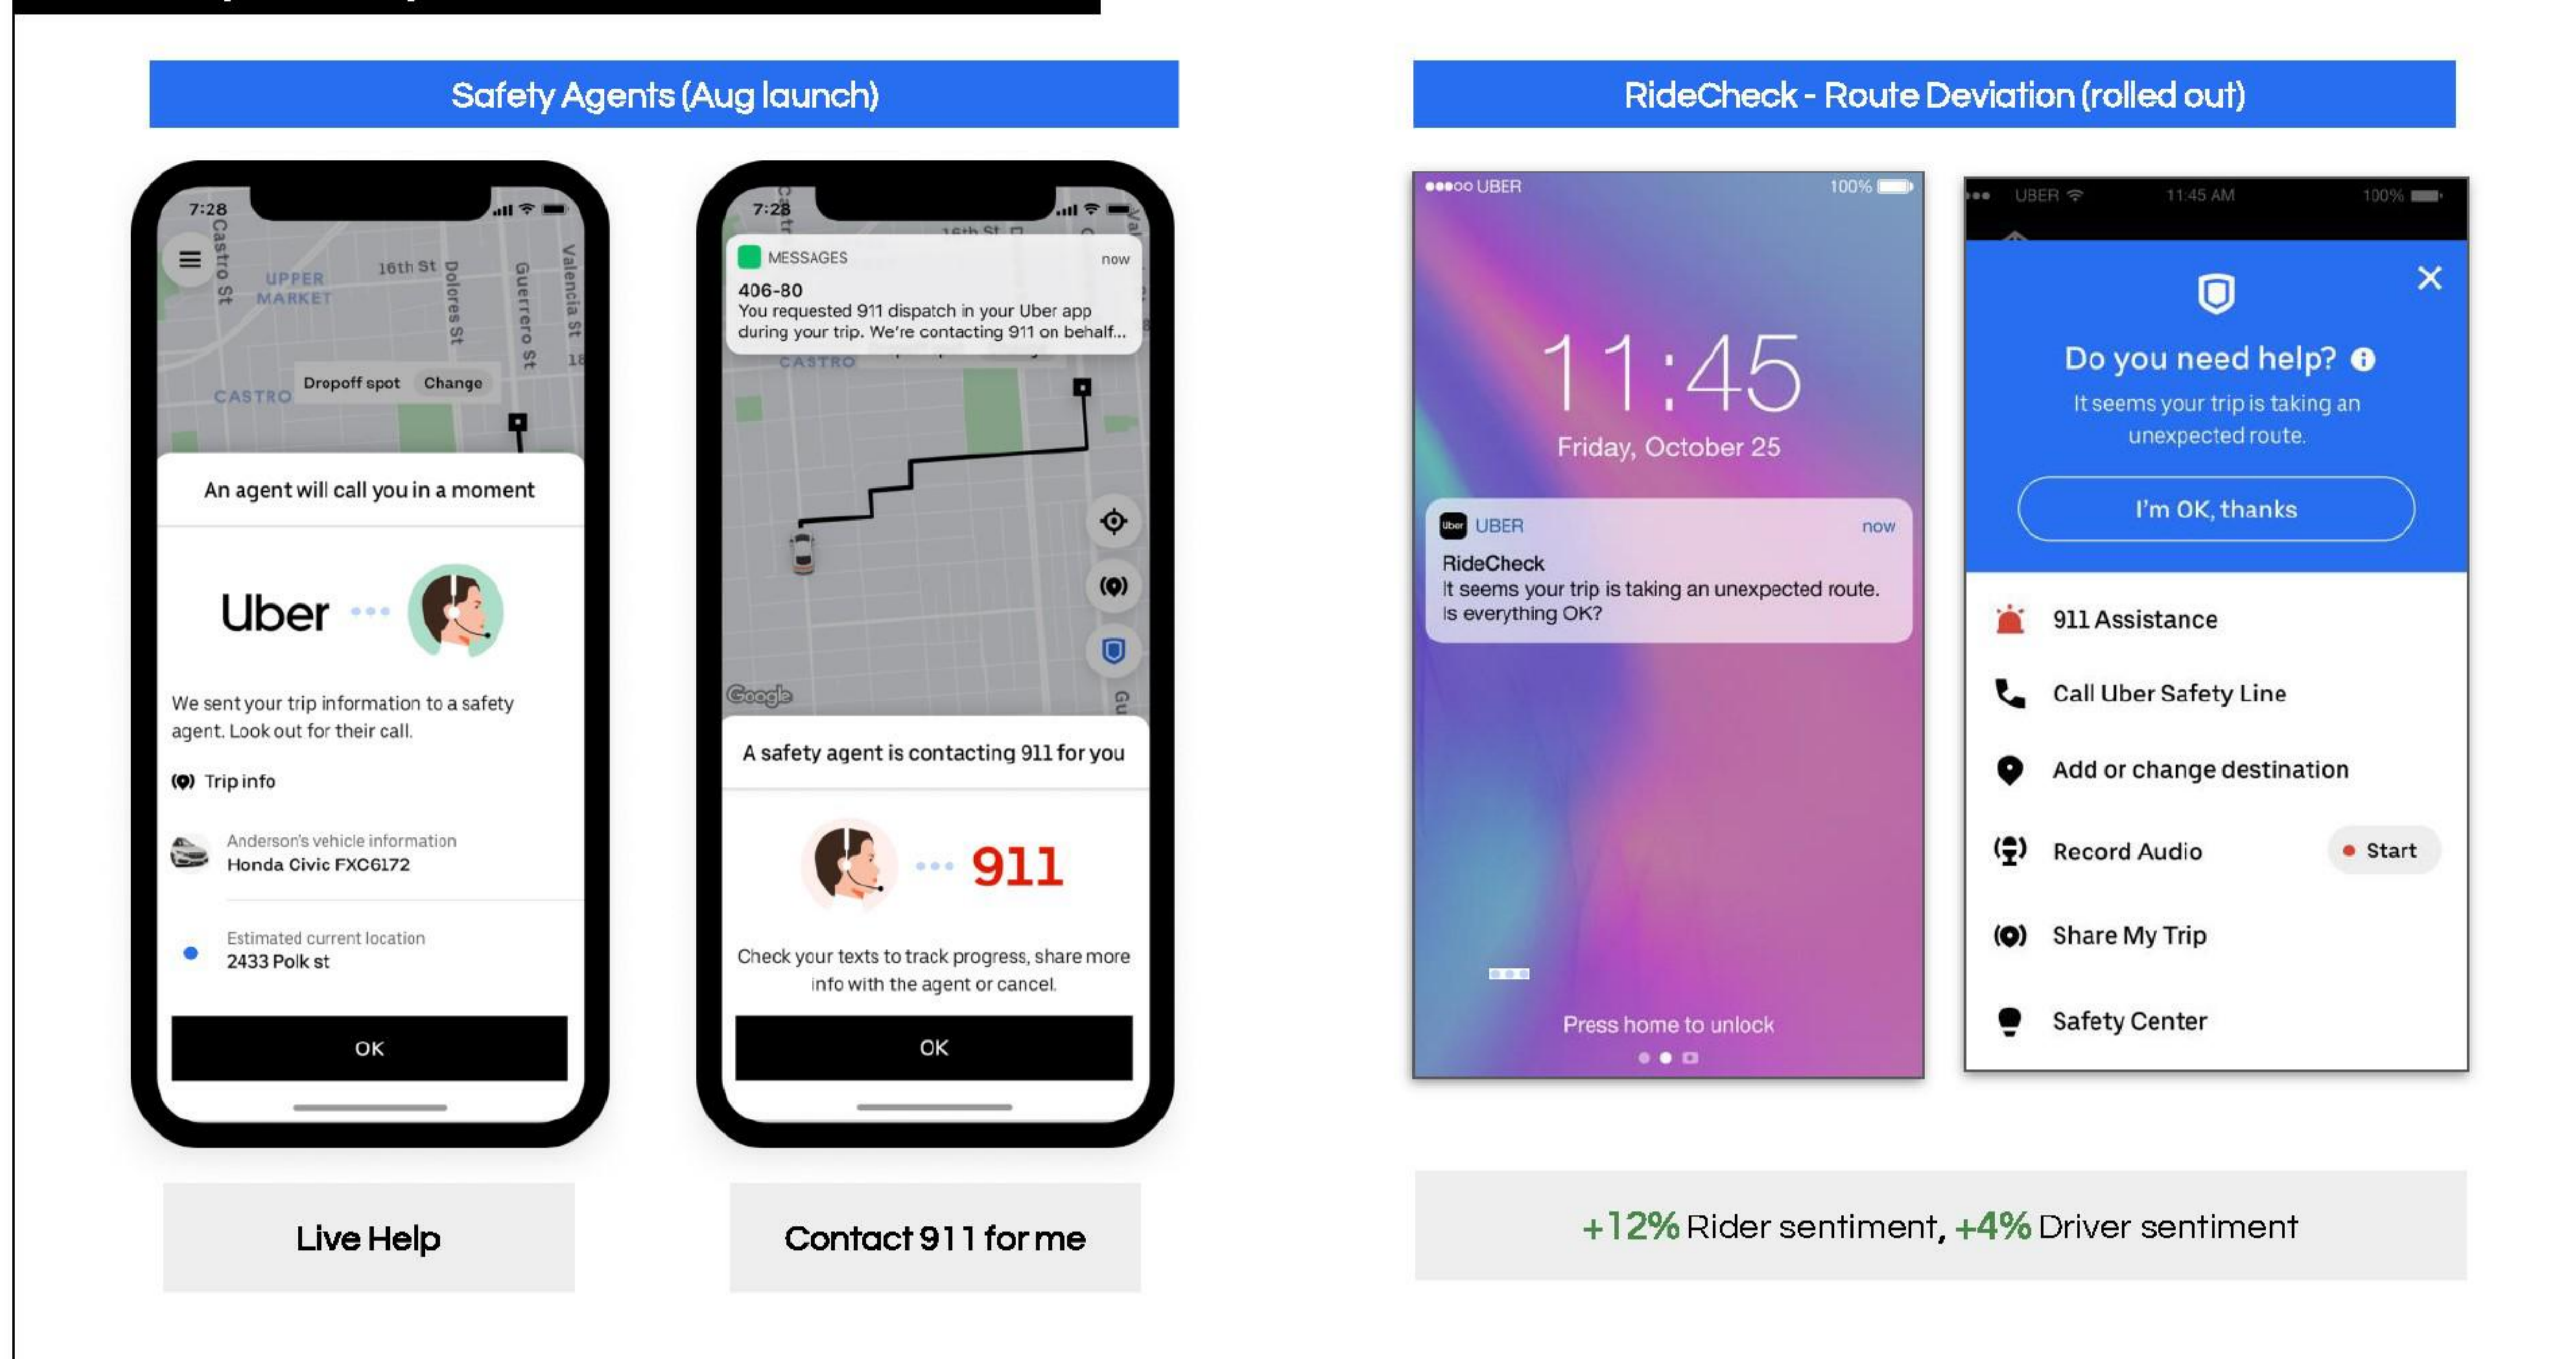

Dashcams & Audio are the most powerful tools we have to prevent incidents + have ground truth on what happened. Our initial dashcam & audio pilots had encouraging results on safety & sentiment, so we're investing further.

Dashcams

BYOD - Live in US & CAN BYODascham functionality to CAN in Aug, which allows drivers to register their dashcam with Uber, and to upload video when filing a safety report.

Vendor pilot -

On-Trip Safety

ADT

In Aug, we launched the Safety Agents pilot in 9 US cities to allow users to connect with a trained safety agent in real-time via our safety toolkit. By partnering with ADT, we introduced the following features:

We are seeing many uncomfortable situations, which don't arise to emergencies, where the feature helped as intended.

Rider - feels uncomfortable because the driver was going in the wrong direction, was driving dangerously, or it was a night trip.

ADT stayed on the line to reassure them.

Driver - safety agent would stay on the line as the driver resolves a mask-related conflict where the rider initially refused to get out of the car, but eventually did.

Metrics

Usage rate of 0.4% of trips (initial projection of 0.5%)

Inbound breakdown: 60% Rider / 40% Driver

Next steps

Product improvements like removing access to the tool during P2 (pick-up) state, and internal process improvements

Discussions with Ops/BD on next steps

SA/SM Education impact on SA/SM IPC Rate

(observational analysis*, not full A/B test)

Drivers who completed the education saw ~10% lower in SA/SM incident rate compared to drivers who didn't complete

Pre-Experiment Period
SA/SM Incident Rate Observation

10/1/2019 -
10/4/2020

Experiment Period

10/5/2020 -
12/31/2020

Treatment Group: Drivers who completed SA/SM education before 1/1/2021.

Control Group: Drivers who did not complete SA/SM education before 1/1/2021.

Post-Experiment Period
SA/SM Incident Rate Observation

1/1/2021 -
5/1/2021

*A causal analysis was conducted to control for certain factors (tenure, activeness, safety history), but it has limitations

Treatment (SA/SM education completed) has seen ~10% lower in SA/SM incident rate, while no significant impact on other IPC (PA,VA,Thero, post trip inappropriate contact) rates. Source

We did not conduct an A/B test due to the long 6 month period for initial completion that would have put us at risk leading up to the Safety Report.

US&C Mobility Safety Incident Rate Breakdown

Metric	Mobility (Incidents per 1MM trips)				2021 Target
	2020	2021 YTD*	YoY Change	L3M Trend**	
Serious Sexual Assault***	8.45	7.30	-14%	●	-10%
Serious Physical Assault	2.41	2.63	+9%	●	-10%
All Auto Crash	88.12	86.79	-2%	●	-5%

*YTD data are through the end of August given audit SLA.

Directional trend over last three months; **Yellow: rate is flat, **Red**: rate is increasing; **Green**: rate is decreasing

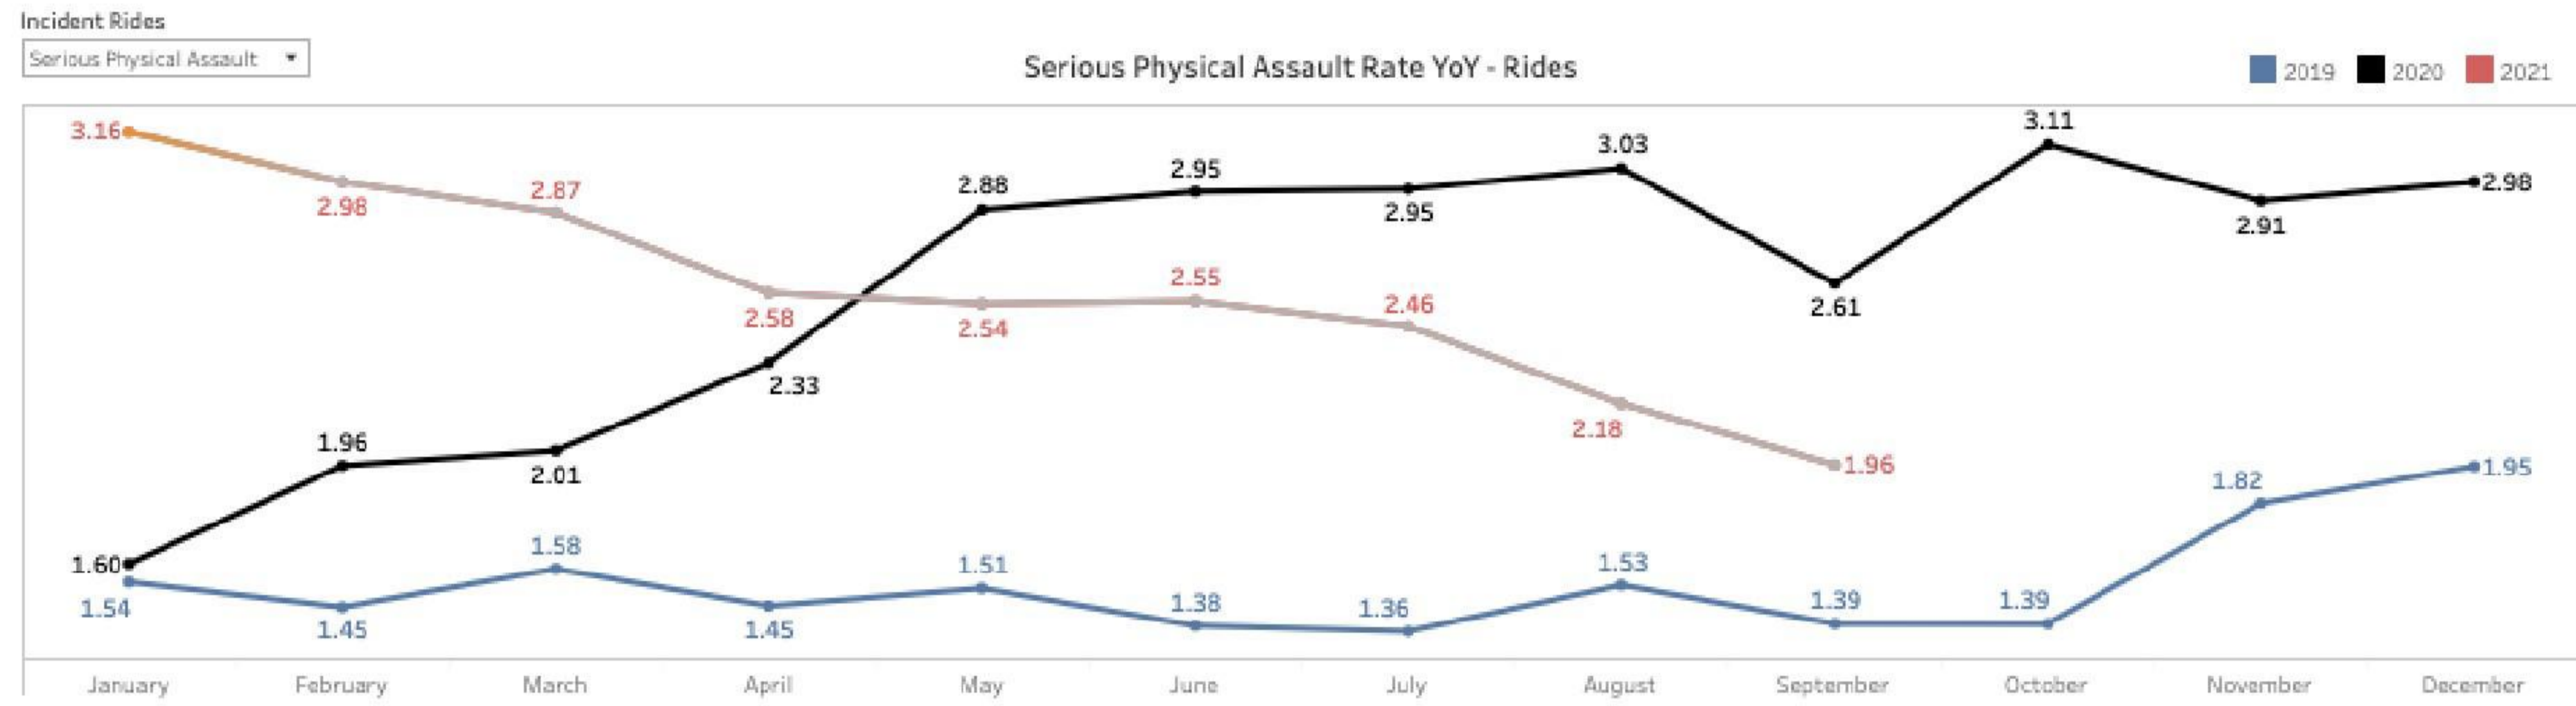

***Serious sexual assault rate covers both critical sexual assaults (five most serious subcategories) and non-critical sexual assault and sexual misconduct incidents

Key Callouts

- **Serious Sexual Assaults:** Rate has been relatively flat between May and September but is elevated when compared to the beginning of the year (up 4% from January 2021 figure). As mentioned previously, upticks in summer months have occurred in prior years and are suspected to be due to increased social activity (21 of the 35 flagged Sev1 SA/SM tickets - 60% - mentioned rider intoxication in July and August)
- **Serious Physical Assault:** Since August Safety Committee meeting, the YTD figure has dropped by 5 percentage points. Downwards trend on the incident rate continued between July and September (September figure down 38% from January 2021 peak - see next slide)
- **All Auto Crashes:** Downwards trend in incident rate between May and September (down 11% in September 2021 from May 2021 figure), but trend is similar to the trend observed in 2020.

Serious PA Rate is trending downwards in recent months

CONFIDENTIAL: DO NOT SHARE

Mobility Safety Incident Rate Regional Breakdown by Country

United States					
	Mobility (Incidents per 1MM trips)				
Metric	2020	2021 YTD*	YoY Change	L3M Trend**	2021 Target

All Auto Crash	89.79	89.37	-0%	●	-5%

Canada					
	Mobility (Incidents per 1MM trips)				
Metric	2020	2021 YTD*	YoY Change	L3M Trend**	2021 Target
Serious Sexual Assault	6.38	4.98	-22%	●	-10%
Serious Physical Assault	1.67	1.43	-14%	●	-10%
All Auto Crash	73.09	60.28	-18%	●	-5%

*YTD data are through the end of August given audit SLA.

Directional trend over last three months; **Yellow: rate is flat, **Red**: rate is increasing; **Green**: rate is decreasing

High Severity Ticket Review - July and August Results

*Comprised of L4 and high-risk L3 tickets as identified by Legal**

Of the 35 SA/SM incidents, 13 incidents involved guest riders (37%). Of the 13 incidents, 4 bounce trip incidents involved female guest riders that occurred on Male rider accounts

21 incidents mentioned rider intoxication (60%)

3 incidents involved third party physical altercations: one in which a third-party tried to jump into an Uber to 'escape' from other third parties but was assaulted; one in which a third party shot into an Uber vehicle killing the rider; and another one involving a third party fighting a driver after an auto crash occurred.

1 carjacking incident took place in Miami in which the account holder added a stop to pick up a guest rider. The guest rider subsequently physically assaulted the driver and stole the vehicle

General Classification	July 2021	August 2021	Count
Serious Sexual Assault Incidents (NCSP)	14	21	35
Crash-related incident	10	10	20
Physical Altercation / Theft-related incident	4	4	8
Healthy Fatality	3	0	3
Total	31	35	66

***Note:** Identified reports include NCSP, fatalities, and incidents that result in life-altering injuries

US&C Mobility: High Severity Incident Read-Out

<i>July and August</i>	# of Incidents	Key Themes + Observations	What opportunities does Uber have?
Motor	20	<p>In 1 incident, the third party reporter mentioned that the auto crash occurred at a known dangerous intersection in Indianapolis</p> <p>In 3 incidents, the drivers provided not-at-fault documentation and are active on the platform (incident 1, incident 2, incident 3). In 6 other incidents, reported allegations include mentions of third party vehicles losing control, including one that mentioned suspected third party intoxication while driving (incident 1, incident 2, incident 3, incident 4, incident 5, incident 6)</p> <p>1 carjacking incident took place in Miami in which the account holder added a stop to pick up a guest rider. The guest rider subsequently physically assaulted the driver and stole the vehicle which fatally hit a third party (account holder rider claims he did not realize the incident would take place and is still active)</p>	<p>Should we try to do more education/intervention on known dangerous intersections?</p> <p>Should we action account holders if guest riders commit serious incidents on the platform?</p>
Physical Assault	8	<p>1 incident was an offline fatality not associated with an Uber trip (although media reports that the driver was doing a delivery)</p> <p>3 incidents involved third party physical altercations: one in which a third-party tried to jump into an Uber to 'escape' from other third parties but was assaulted; one in which a third party shot into an Uber vehicle killing the rider; and another one involving a third party fighting a driver after an auto crash occurred.</p>	n.a.
Critical Sexual Assault	35	<p>13 incidents involved guest riders (37%). Of the 13 incidents, 4 bounce trip incidents involved female guest riders that occurred on Male rider accounts (incident 1, incident 2, incident 3, incident 4)</p> <p>21 incidents mentioned rider intoxication (60%)</p> <p>5 incidents mention the reported rider sitting in the driver vehicle's front seat prior to the incident occurring (incident 1, incident 2, incident 3, incident 4, incident 5)</p>	Should we double down on education around front seat restrictions in COVID environment?

**Comprised of L4s and high-risk L3s. Three other incidents were identified to our team that falls under the 'Healthy Fatality' category.*

02 | KPIs - Access Safety

Screenings Operational Health Scorecard

KPI	Target	Actual (Sep'21 - MTD)		Commentary
Screenings Efficiency and Quality				
Crim. End-to-end TaT (days)	p50: 1.0 p75: 1.5 p90: 4.0	p50: 0.52 p75: 3.27 p90: 7.19	●	<ul style="list-style-type: none"> Significant decrease in E2E TaT due to progress on adjudication TaT P50 for basic report TaT (unlocks access to the platform) lower than target; need to continue to work with Checkr to continue to bring down TaT to achieve P75 and P90
Crim. Checkr TaT (days)	p50: 0.4 p75: 1.3 p90: 3.8	p50: 0.38 p75: 3.19 p90: 7.00	●	<ul style="list-style-type: none"> While TaT for report completion has significantly decreased since beginning of 2021, desired p75 and p90 TaTs are not being met. BD (Buck) is having conversations with Checkr to set explicit SLA expectations Better regional insights needed to manage TaTs; dashboard is scoped for November / December with GSS
Crim. Adjudication TaT (days)	p50: 0.5 p75: 0.75 p90: 1.0	p50: 0.31 p75: 0.74 p90: 1.02	●	<ul style="list-style-type: none"> TaT has decreased significantly and it is below target after the adjudication operation returned to health. Adjudication team is fully staffed so we expect that the TaT will continue below target in the next month

Turnaround times are based on the month in which the report completes
TaT data source

Screenings Operational Health Scorecard

KPI	Target	Actual (Sep'21 - MTD)		Commentary
Reliability				
Submissions due to manual sweeps / Total Submissions (Mobility + Delivery)	<1%	8.8%	●	<ul style="list-style-type: none"> The manual sweeps managed by Ops have a significant impact on the number of total background check submissions (50.8k submissions). Tech is working to (1) automate sweeps, increasing the cadence from twice a week to hourly/daily - 10/4 and (2) addressing root causes of reliability issues - end of Nov.
Safety User Experience				
Regrettable Expirations	TBD	5,313 earners (0.77% of monthly active)	●	<ul style="list-style-type: none"> Sep'21 regrettable expirations decreased relative to the prior two months. However, July and August had high regrettable expiration rates due to the lack of rerun adjudication prioritization and the NYC outage, respectively. Sep'21 regrettable expiration is still below the 2020 average
BGC Jira Inbounds (Mobility + Delivery)	1,500 / week 0.1 per BGC contact	12,397 / week 0.32 per BGC contact	●	<ul style="list-style-type: none"> ~70% of the JIRA volume is caused by a tech reliability issue. The main issue type is "all documents approved; no submission" which will be addressed as tech fixes the reliability issues by the end of Nov. Estimated RTH is 11/1; potential to accelerate with additional analytical support.
BGC Contact Rate (tickets / deliveries)	0.07%	0.24%	●	<ul style="list-style-type: none"> The number of BGC related contacts has been slightly trending down for the last three months.
Spend				
Checkr Transactional BGC Spend* <i>May evolve to CPT or \$/BGC</i>	Q3'21 (forecast): \$21.9M	Q3'21 (projection): \$21.9M	●	<ul style="list-style-type: none"> Q3'21 actual still need to be confirmed as we are waiting for the September invoice from Checkr and it is contingent on MOB cost split.
Avg. Cost per Adjudication	Under development with shared services finance			
Avg. Cost per JIRA				

- Submissions due to manual sweeps (submits)
- Total submissions (count_submissions)
- Regrettable expirations
- BGC JIRA Inbounds
- BGC contact rate

Identity KPIs

Metric	Latest Value	Change	North Star	Status
Earners Identity				
Driver Identity Baseline: US L28 Identity Fraud Rate (P2P, NYC Uber Black) source	0.17% (Q1 - Mobility)	+07pp since H2 2020	0.08%	
Fraud Deactivations Pre-First Trip: % of earner document fraud deactivations pre-first trip source	64% (Aug - Mobility & Delivery)	-4pp since June	100%	
SSN Validation: % of active earners with validated SSN/Last Name source	98% (Sept - Mobility & Delivery)	+22pp since Aug	100%	
Spender Identity				
Spender Identity Verification for Anonymous Payments: % of Spenders with anonymous payment methods with a verified identity via Social Connect or DocScan source	97% (July - Mobility & Delivery)	+19pp since Apr	100%	

Key Callouts:

- 1) Driver ID Baseline L28 Fraud Rate for Q2 coming soon - audit is 99% complete
- 2) SSN Validation Backfill resumed in September with legal's approval given the ongoing DOJ investigation, resulting in a 22 pp increase.

We will stop reporting the anonymous payment one since it has reached goal (francisco can tell you about the 3%) and will be monitoring but only report if it falls behind (like why we are reporting ssn)

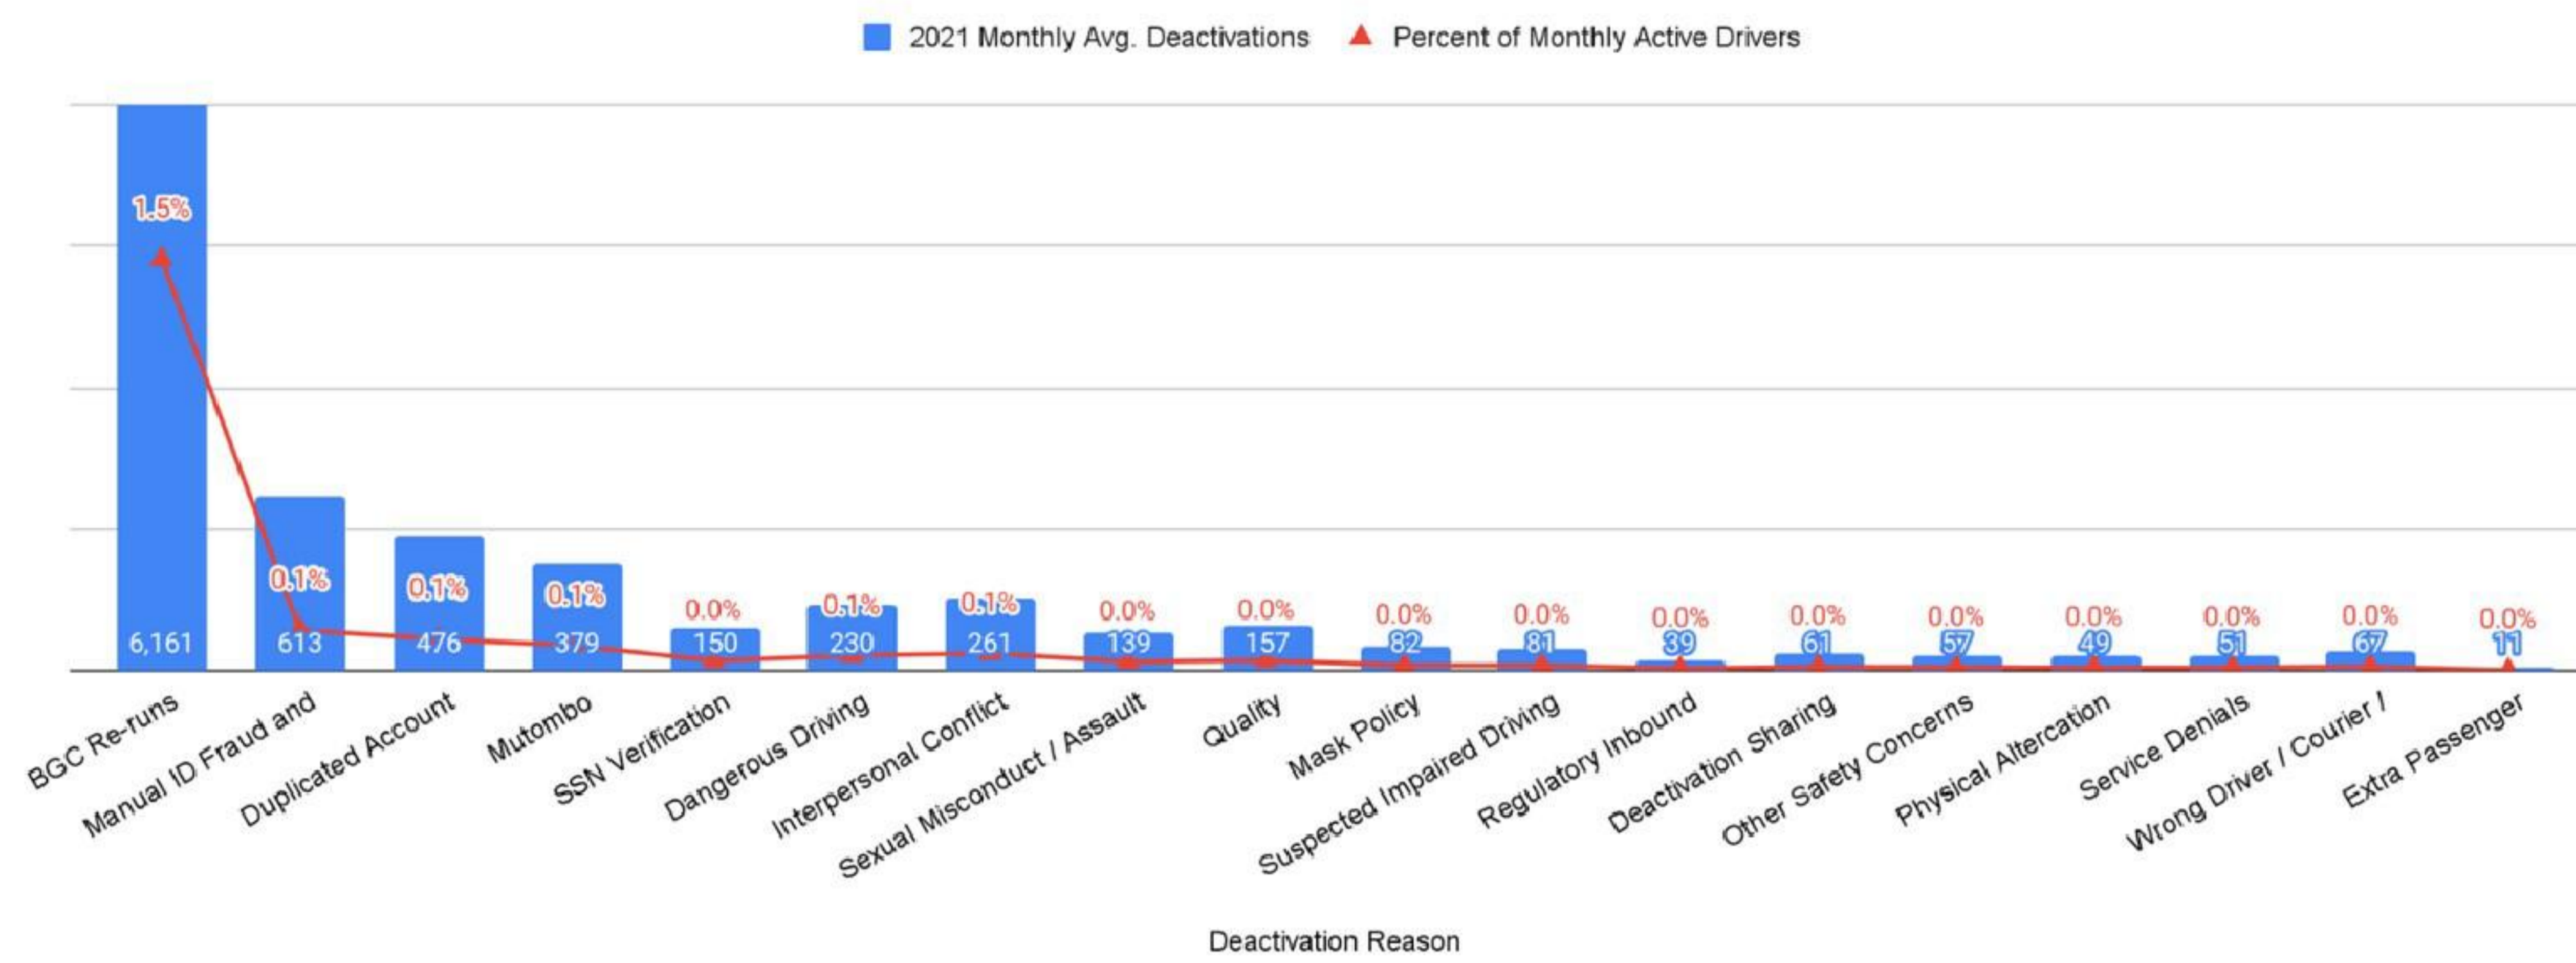

Docscan:

Rides - 100% docscan

Eats - 100% docscan for iOS; 100% social connect for android (but launching an XP soon to test docscan against social connect)

02 | KPIs - Deactivations

BGC reruns continue to be the largest reason for drivers to lose access to the mobility platform in 2021

BGC, identity, and safety report-related deactivations represent ~1.7% of monthly active drivers (~72,500 deactivated drivers YTD, through August)

>90% of deactivated drivers were in the the Blue loyalty tier and less than 5% in Platinum & Diamond loyalty tiers

Note: Data are through the end of August 2021. The following deactivation reasons are excluded given that they are out-of-scope for the US&C safety team: quality, financial fraud, other fraud, and food theft.

	<ul style="list-style-type: none"> • AI: Set up meeting with Danielle to do deep dive on SA/SM approach and learnings to date on SH impact 	Cory / Margalit	Done

Thank You!

Rider ID (update)

In 2020, the US carjacking incident rate increased on both Rides and Eats, particularly in Chicago. Opportunity analysis showed that spenders with anonymous payment methods (gift cards, Venmo, prepaid cards) were the most likely to commit these incidents. To address this, in February 2021 we launched DocScan verification for new Venmo, gift card, or prepaid card users, and also for existing prepaid card users with a new device login (likely to be an account takeover).

Impact

+10% rider-to-driver 7-day SUFT rate compared to Social Connect (previous verification method for anonymous payments)

Directional decrease in carjackings (and positive press)

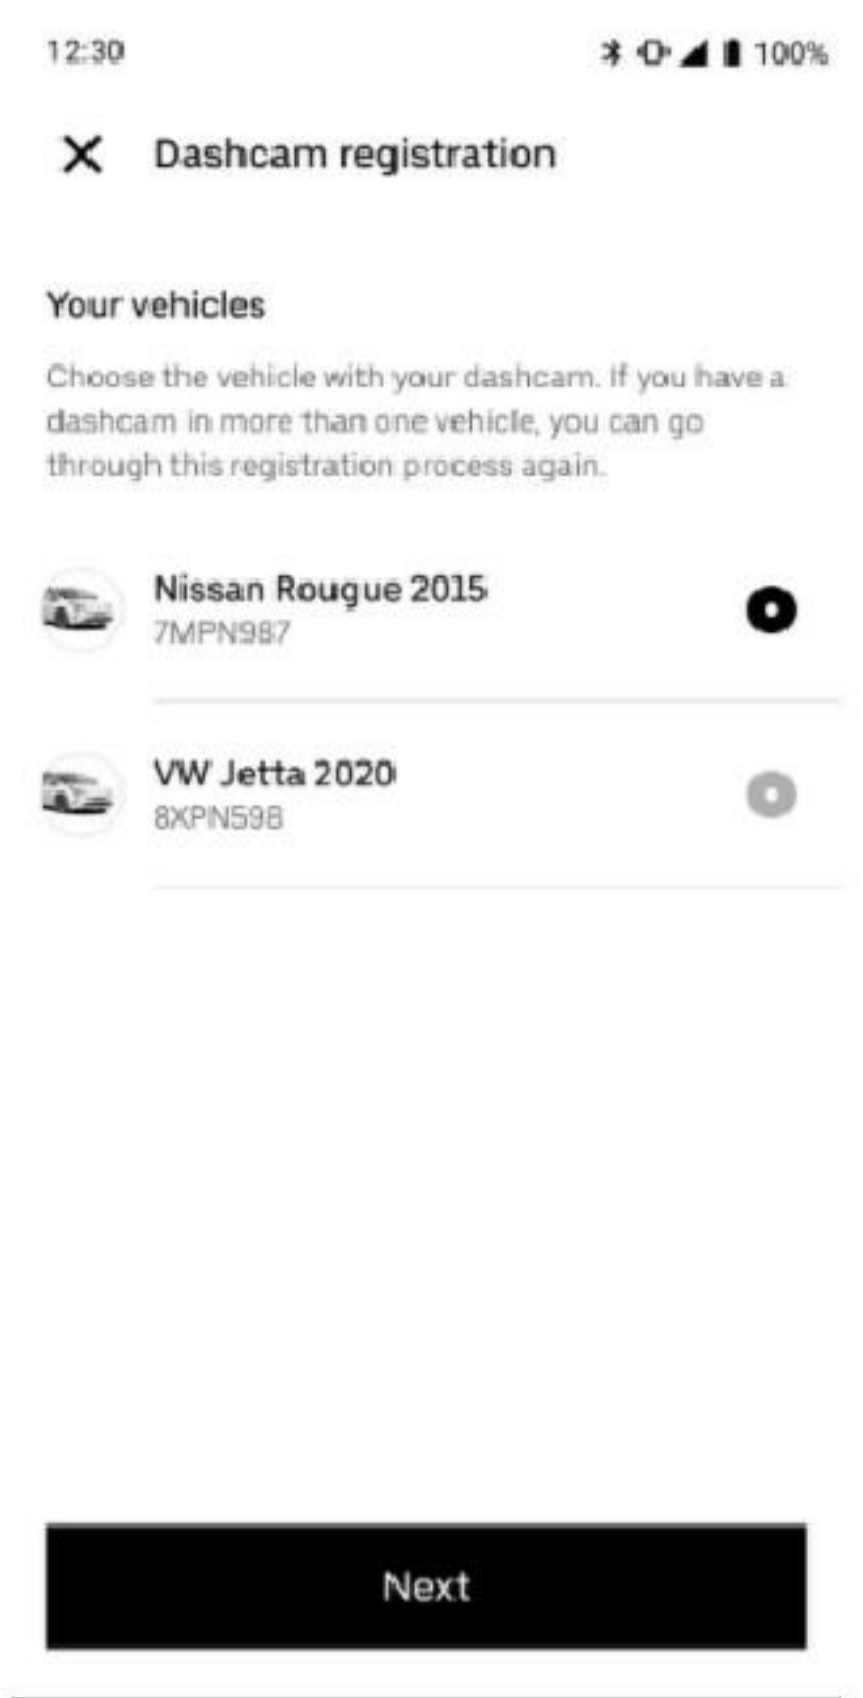

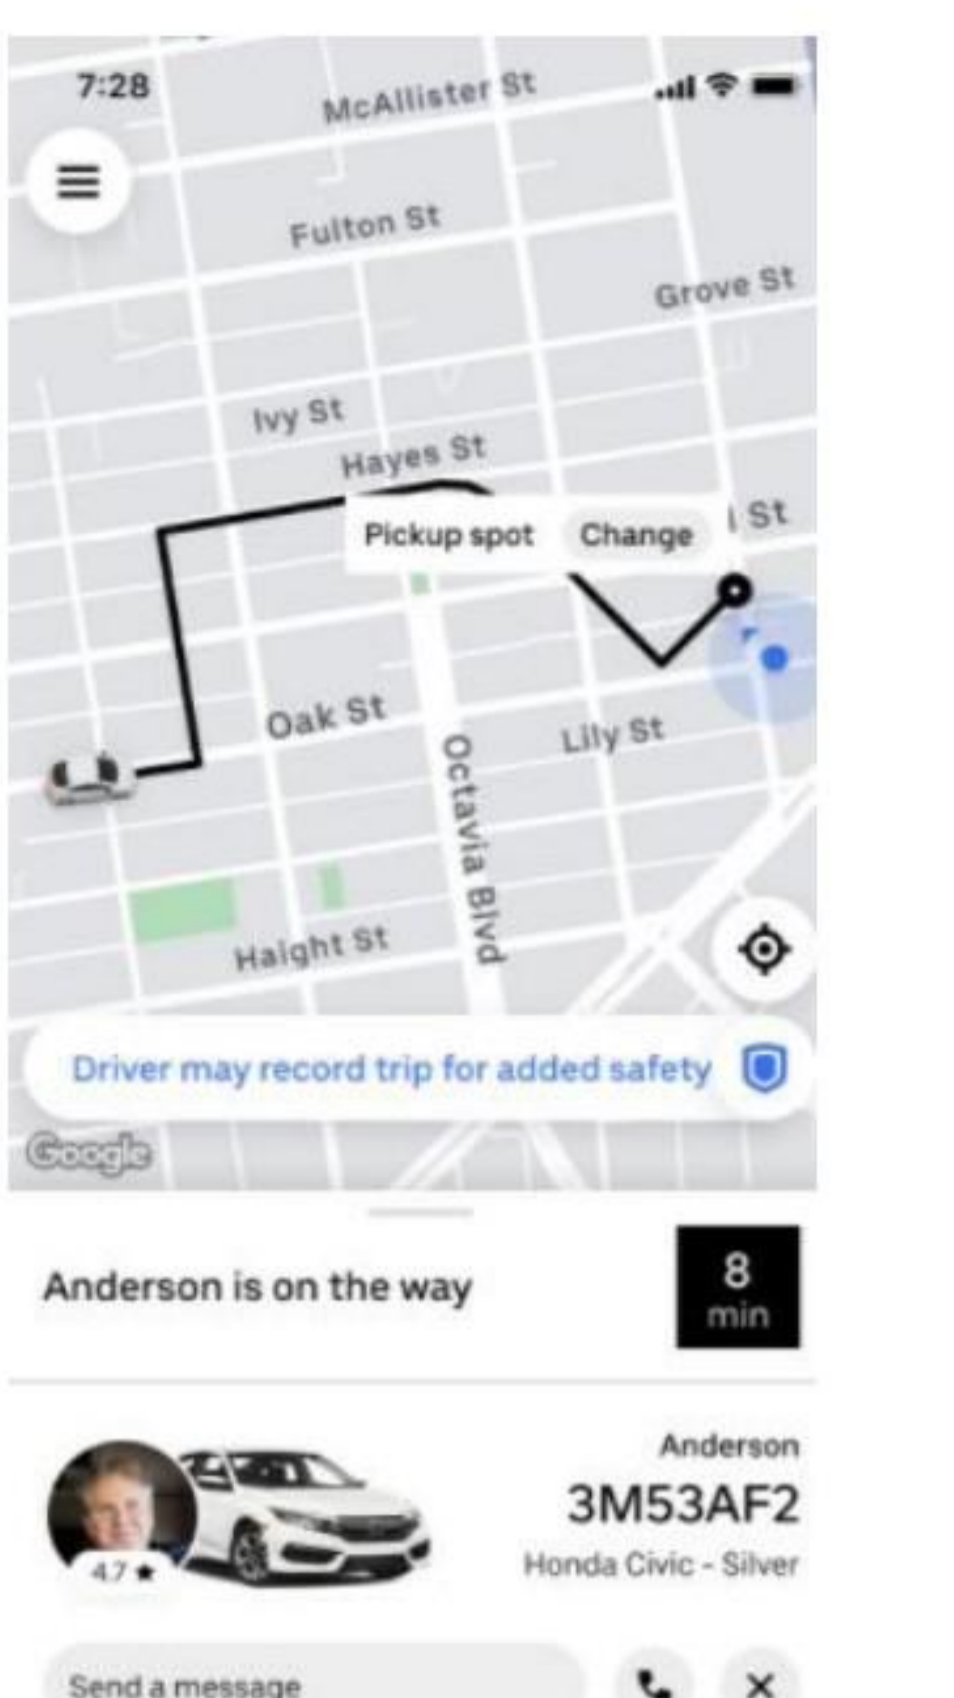

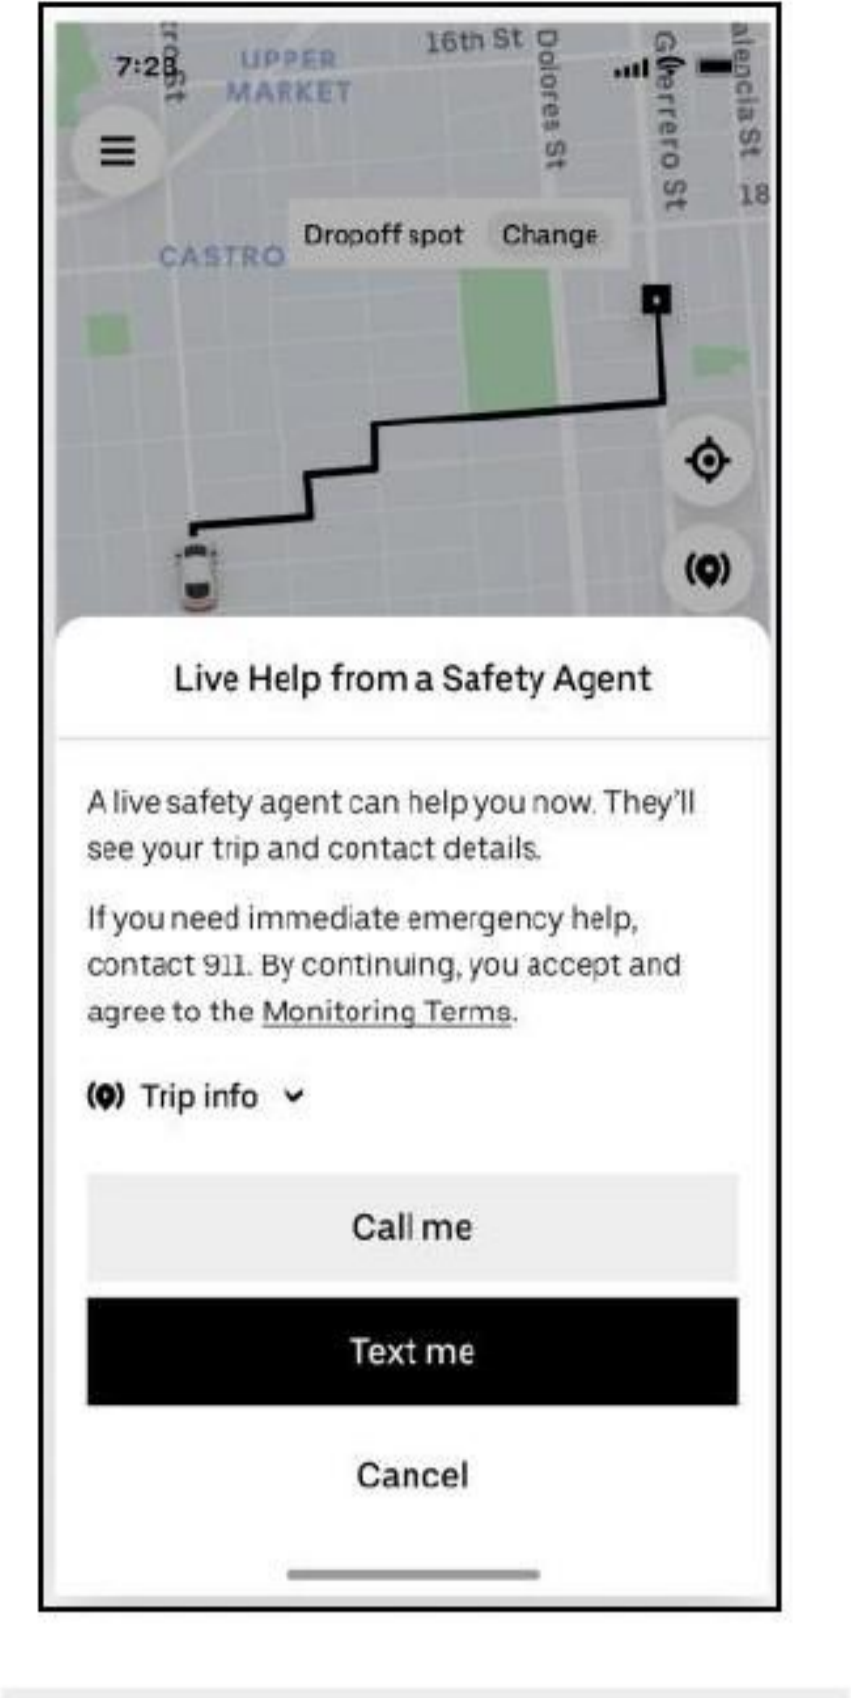

Next steps

Following a successful 3-month funnel XP on Eats, this week we rolled out to 100% on Eats (+9% 7-day SUFT compared to Social Connect)

OOA (H1)

Uber nav is designed for cars & can recommend unsafe routes like tunnels. This features pushes you to a 3rd party nav app which supports 2w nav

iOS rollout last year, Android rollout in Q2 this year

EC (H1)

We launched this on the Earner side in H1 and 46% of WACouriers & 21% WADrivers had added one set (Data)

Rider side starting rollout in Oct

RideCheck - Courier long stop (deck)

A streamlined and systematic process to detect road incidents

Notify regulators + check in with couriers

Live in ANZ

DTAD (Q3, prd)

Uber app notifications can be distracting for couriers and can be the cause of dangerous situations (validated via surveys). This feature gives you an educational prompt when the courier tries to access intercom chat that reminds you to "don't type and drive"

We've a whole project around reducing distractions

Mutombo

Huge hustle to make # of changes around frequency, detection & actioning more strict.

Liveness shown here is one example (applicable for iOS only)

33% reduction since May and Sept is trending down further
